2015 Visually Edited Data Items

The list of visually edited data items for 2015 has been posted to the CCR web site (click here to access). This list is effective July 1, 2015. Discrepancies will be counted on the first 16 visually edited data items that remain the same as last year. As a reminder, Behavior was added last year with "feedback only" until 12/31/2014. Behavior discrepancies will be included in discrepancy counts as well as accuracy rate calculations.

Feedback only will be provided through 12/31/2015* for the following new visually edited data items: Surgery fields (Proc 1-3), treatment data fields including Radiation, Chemotherapy, Hormone, Immunotherapy, Transplant/Endo Therapy, and Other Therapy.

In addition, feedback only will be provided from 7/1/2015-6/30/2016* on directly coded SEER Summary Stage 2000 and directly assigned TNM fields.

Reporting facilities will continue to receive visual editing discrepancy and accuracy reports as per standard regional procedure.

*Note: Data items receiving feedback only will not be counted in accuracy rate calculations. .
