NEW HISTOLOGY CODES FOR LYMPHOMAS AND LEUKEMIAS

NEW LYMPHOMA TERMS. *Effective for cases diagnosed January 1, 1995, and after.*

ICD-O Code	Term
9673/3	Mantle cell lymphoma (*)
9688/3	T-cell rich B-cell lymphoma
9708/3	Subcutaneous panniculitic T-cell lymphoma
9710/3	Marginal zone lymphoma, NOS
9714/3	Anaplastic large cell lymphoma (ALCL), CD30+ (*)
9715/3	Mucosal-Associated Lymphoid Tissue (MALT) lymphoma
9716/3	Hepatosplenic $\gamma\delta$ (gamma - delta) cell lymphoma
9717/3	Intestinal T-cell lymphoma Enteropathy associated T-cell lymphoma

(*) new term(s) for an existing number

NEW LEUKEMIA TERMS. *Effective for cases diagnosed January 1, 1998, and after.*

The following rules are to be used. They are in priority order:

1. Code the FAB (French-American-British) classification. FAB is implied if the description includes "L" or "M" with a number such as "L2" or M5". If more than one FAB classification is listed, use the NOS code. Example:

Path: "Acute myelogenous leukemia, probably M1 or M2...."

Code to 9861/3, Acute myeloid leukemia, NOS

2. If the diagnostic statement lists a specific acute leukemia cell type, code that term. If more than one term is listed, use rules in ICD-O-2.

In addition to these rules, the following information will assist in assigning codes:

- "Maturation" and "differentiation" are synonymous.
- Code "acute non-lymphocytic leukemia" as 9861/3, acute myelogenous leukemia, NOS.
- Code "acute biphenotypic leukemia" or "mixed lineage leukemias" to 9801/3, acute leukemia, NOS.
- Terms equivalent to granulocytic are: myeloblastic, myelocytic, myelogenous, myeloid, non-lymphocytic.
- Terms equivalent to lymphocytic are: lymphoblastic, lymphoid, lymphatic.

ICD-O Code	Term
9821/3	Acute lymphoblastic leukemia, L1 type (*) Acute lymphocytic leukemia, L1 type (*) Acute lymphoid leukemia, L1 type (*) Acute lymphatic leukemia, L1 type (*)

	Lymphoblastic leukemia, L1 type (*) FAB L1 (*)
9826/3	FAB L3 (*)
9828/3	Acute lymphoblastic leukemia, L2 type Acute lymphocytic leukemia, L2 type Acute lymphoid leukemia, L2 type Acute lymphatic leukemia, L2 type Lymphoblastic leukemia, L2 type FAB L2
9840/3	FAB M6 (*)
9861/3	Acute myeloid leukemia, NOS (*) Acute myeloblastic leukemia, NOS (*) Acute granulocytic leukemia, NOS (*) Acute myelogenous leukemia, NOS (*) Acute myelocytic leukemia, NOS (*)
9866/3	FAB M3 (*)
9867/3	Acute myelomonocytic leukemia, NOS (*) FAB M4 (*)
9871/3	Acute myelomonocytic leukemia with eosinophils FAB M4E
9872/3	Acute myeloid leukemia, minimal differentiation Acute myeloblastic leukemia, minimal differentiation Acute granulocytic leukemia, minimal differentiation Acute myelogenous leukemia, minimal differentiation Acute myelocytic leukemia, minimal differentiation FAB M0
9873/3	Acute myeloid leukemia without maturation Acute myeloblastic leukemia without maturation Acute granulocytic leukemia, without maturation Acute myelogenous leukemia, without maturation Acute myelocytic leukemia, without maturation FAB M1
9874/3	Acute myeloid leukemia with maturation Acute myeloblastic leukemia with maturation Acute granulocytic leukemia, with maturation Acute myelogenous leukemia, with maturation Acute myelocytic leukemia, with maturation FAB M2
9891/3	FAB M5 (*) FAB M5A (*) FAB M5B (*)
9910/3	Megakaryoblastic leukemia, NOS (C42.1) FAB M7

(*) new term(s) for an existing number

RULES FOR DETERMINING RESIDENCY OF MILITARY PERSONNEL ASSIGNED TO SHIPS AND CREWS OF MERCHANT VESSELS

Cancer reporting facilities that serve patients in the U.S. Navy or Merchant Marine need detailed rules for determining whether their patients are residents of their region for purposes of cancer reporting. The rules for determining residency are the same as those used by the Census Bureau. The guidelines that follow were adapted from U.S. Department of Commerce publications.

NAVY PERSONNEL

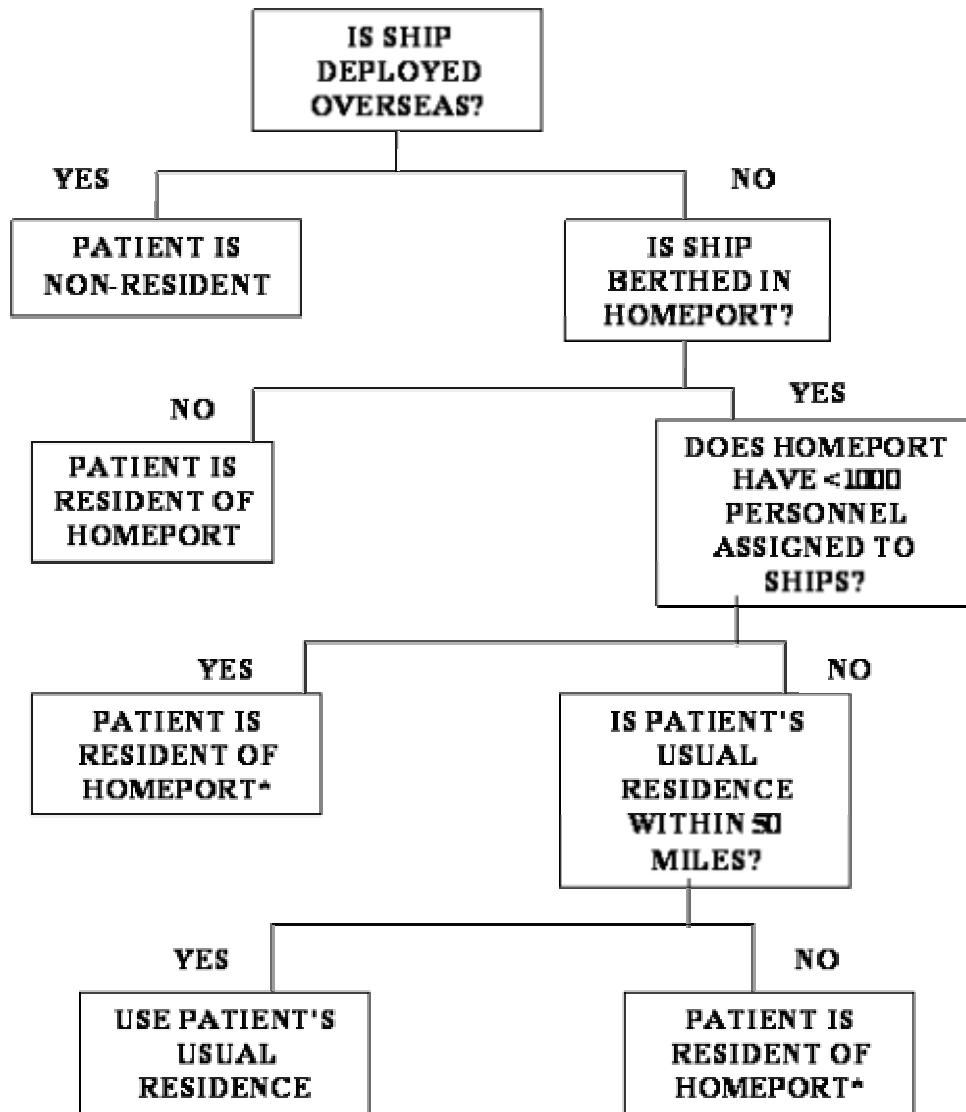

Patients diagnosed with cancer while their ships are deployed overseas are considered overseas residents for cancer-reporting purposes. For ships not deployed overseas, specific rules (shown in the chart below) apply. The Navy assigns a homeport to each of its ships. If a ship that is not deployed overseas is not berthed in its homeport, any crew member diagnosed with cancer is considered a resident of the homeport. If the ship is berthed in its homeport, and the homeport has fewer than 1000 naval personnel assigned to ships, a crew member diagnosed with cancer is considered a resident of the ship. If, however, the homeport has more than 1000 naval personnel assigned to ships and the cancer patient has a usual residence within 50 miles of the homeport, the person's residence is the home, not the ship itself. If the patient's usual residence is more than 50 miles from the homeport, he or she is considered to be a resident of the ship. For patients who are considered residents of a ship, code residence as the ship's homeport unless the homeport is contained in more than one municipality. In that case, code the patient's residence as the municipality immediately adjacent to the dock or pier where the ship is berthed.

CREWS OF MERCHANT VESSELS

Crews of U.S. vessels outside the U.S., or crews of vessels flying a foreign flag, are considered non-residents. If a U.S. vessel is not berthed in a U.S. port but is in territorial waters, and the port of destination is inside the U.S., a crew member diagnosed with cancer is considered a resident of the port of destination. If the destination is outside the U.S., the homeport of the ship is considered the patient's residence. If a U.S. vessel is berthed in a U.S. port at the time of diagnosis, the patient is a resident of that port.

CHART

Summary of Rules for Determining Residency of Navy Personnel Assigned to Ships

* If homeport is maintained in more than municipality, code patient as resident of the municipality immediately adjacent to the dock or pier where the ship is berthed.

SUMMARY OF CODES

The codes used for reporting cancer data to the CCR are summarized below. For explanations of the codes and status of data item reportability to the CCR, refer to the sections indicated. Only coded items, not text fields, are listed here.

Note: 2006 changes are indicated by *boldface, italic, maroon text*.

SECTION ITEM	CODE																	
REGISTRY INFORMATION																		
III.1.1	Abstractor	Three initials of abstractor; flush left, no spaces between initials XXX = unknown																
II.2.3	Accession Number	Nine-digit number assigned to patient by hospital tumor registry																
II.2.4	Sequence Number	<table border="0"> <tr> <td>00</td> <td>ONE PRIMARY MALIGNANCY</td> </tr> <tr> <td>01</td> <td>FIRST OF TWO OR MORE PRIMARIES</td> </tr> <tr> <td>02</td> <td>SECOND OF TWO OR MORE PRIMARIES</td> </tr> <tr> <td>...</td> <td></td> </tr> <tr> <td>10</td> <td>TENTH OF TEN OR MORE PRIMARIES</td> </tr> <tr> <td>11</td> <td>ELEVENTH OF ELEVEN OR MORE PRIMARIES</td> </tr> <tr> <td>...</td> <td></td> </tr> <tr> <td>99</td> <td>SEQUENCE UNKNOWN</td> </tr> </table>	00	ONE PRIMARY MALIGNANCY	01	FIRST OF TWO OR MORE PRIMARIES	02	SECOND OF TWO OR MORE PRIMARIES	...		10	TENTH OF TEN OR MORE PRIMARIES	11	ELEVENTH OF ELEVEN OR MORE PRIMARIES	...		99	SEQUENCE UNKNOWN
00	ONE PRIMARY MALIGNANCY																	
01	FIRST OF TWO OR MORE PRIMARIES																	
02	SECOND OF TWO OR MORE PRIMARIES																	
...																		
10	TENTH OF TEN OR MORE PRIMARIES																	
11	ELEVENTH OF ELEVEN OR MORE PRIMARIES																	
...																		
99	SEQUENCE UNKNOWN																	
II.2.1	Year First Seen	Four-digit number assigned by the hospital tumor registry to each registered case																
III.1.4	Reporting Hospital	Ten-digit number assigned by CCR (see code or alphabetic listing found on the CCR web site at: http://www.ccrca.org/edits/CA_Hosp_Codes_by_code.pdf and http://www.ccrca.org/edits/CA_Hosp_Codes_by_name.pdf); blank if unknown																
III.1.6	ACoS Approved Flag	<table border="0"> <tr> <td>1</td> <td>CANCER PROGRAM APPROVED</td> </tr> <tr> <td>2</td> <td>CANCER PROGRAM NOT APPROVED</td> </tr> <tr> <td>Blank</td> <td>CASES DIAGNOSED BEFORE 1999</td> </tr> </table>	1	CANCER PROGRAM APPROVED	2	CANCER PROGRAM NOT APPROVED	Blank	CASES DIAGNOSED BEFORE 1999

III.3.10	Hospital Referred From		Ten-digit number assigned by CCR (see code or alphabetic listing found on the CCR web site at: http://www.ccrca.org/edits/CA_Hosp_Codes_by_code.pdf and http://www.ccrca.org/edits/CA_Hosp_Codes_by_name.pdf); blank if unknown
III.3.11	Hospital Referred To		Ten-digit number assigned by CCR (see code or alphabetic listing found on the CCR web site at: http://www.ccrca.org/edits/CA_Hosp_Codes_by_code.pdf and http://www.ccrca.org/edits/CA_Hosp_Codes_by_name.pdf); blank if unknown
III.3.12	Physicians		Eight-digit code based on physician's state license number (7 fields); may enter dentist's and osteopath's license number; may enter out-of-state license but first character must be an X; blank if not applicable; Attending Physician may not be blank. If there is no attending physician, or if it cannot be determined who the attending physician is, the code for unknown physician or license number not assigned (99999999) must be entered.
III.3.13	Comorbidity/Complications 1-10		Enter the patient's preexisting medical conditions, factors influencing health status, and/or complications during the patient's hospital stay for the treatment of the cancer. These factors may affect treatment decisions and influence outcomes. Although data collection for these fields is not required by the CCR, Comorbidity/Complications 1- 10 will be collected from CoC facilities. Refer to the FORDS Manual for instructions.
III.3.14	ICD Revision Comorbidities and Complications	0	No secondary diagnosis reported
		1	ICD - 10
		9	ICD - 9
III.3.15	Discovered By Screening	0	No (discovered by some other method such as symptomatic patient)
		1	Routine screening exam (e.g. routine screening mammogram in asymptomatic patient)
		2	Hospital screening program (targeted to a particular cancer)
		3	State-sponsored screening program
		4	Nationally-sponsored screening program
		5	Other type of screening (e.g. American Cancer Society screening project)
		9	Unknown if via screening default

TUMOR DATA

IV.1.7.1	Pathology Report Number-Biopsy/FNA	Ten-character, alphanumeric, left justified. Special characters allowed. May be left blank.

Extent of Disease

V.4.1	Extent of Disease	<p>EOD items may be blank if not abstracted prior to January 1, 1994. For cases diagnosed 1/1/94 and after, these fields must be coded. For SEER regions, the date is earlier (1/1/88 for Region 8, and 1/1/92 for Region 1 and Region 9). Please refer to SEER Extent of Disease - 1988 Codes and Coding Instructions - for codes.</p>
-------	-------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

With the implementation of Collaborative Staging the Regional Nodes Positive and Examined fields are the same fields for CS and for EOD. However, effective with cases diagnosed January 1, 2004 forward, the codes for Regional Nodes Positive have changed. Cases diagnosed prior to January 1, 2004 will be converted.

Note: Any cases entered after the conversion process should apply the new codes regardless of date of diagnosis.

The new codes are as follows:

Regional Nodes Positive	00 01-89 90 95 97 98 99	ALL NODES EXAMINED ARE NEGATIVE. 1-89 NODES ARE POSITIVE. (CODE EXACT NUMBER OF NODES POSITIVE) 90 OR MORE NODES ARE POSITIVE POSITIVE ASPIRATION OF LYMPH NODE(S) WAS PERFORMED POSITIVE NODES ARE DOCUMENTED, BUT THE NUMBER IS UNSPECIFIED NO NODES EXAMINED IT IS UNKNOWN WHETHER NODES ARE POSITIVE; NOT APPLICABLE; NOT STATED IN PATIENT RECORD
-------------------------	-------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

V.4.2 Collaborative Staging Beginning with cases diagnosed January 1, 2004 forward and for cases with an unknown date of diagnosis first seen at your facility after January 1, 2004, the CCR requires the collection of Collaborative Staging (CS) data items necessary to derive AJCC T, N, M, Stage Group, Summary Stage 1977, and Summary Stage 2000 (Derived AJCC T, Derived AJCC N, Derived AJCC M, Derived AJCC Stage Group, Derived SS1977, Derived SS2000, Derived AJCC Flag, Derived SS2000 Flag, Derived 1977 Flag, CS Version 1st, and CS Version Latest) for all cases. These required data items include:

- CS Tumor Size
- CS Extension
- CS Lymph Nodes
- Regional Nodes Positive*
- Regional Nodes Examined
- CS Mets at Diagnosis
- CS Site Specific Factor 1
- CS Site Specific Factor 2
- CS Site Specific Factor 3
- CS Site Specific Factor 4
- CS Site Specific Factor 5
- CS Site Specific Factor 6

* Definition changes were made to codes 90-97. See Section V.4.1 for the table of new codes for the Regional Nodes Positive field.

The following Collaborative Staging data items are not required by the CCR, but are to be sent from CoC approved facilities:

- CS Tumor Size/Extension Evaluation
- CS Lymph Node Evaluation
- CS Metastasis Evaluation
- Derived AJCC T Descriptor
- Derived AJCC N Descriptor
- Derived AJCC M Descriptor

Please refer to the Collaborative Staging Manual for coding instructions.

Cases diagnosed prior to January 1, 2004 should continue to use the EOD fields with the exception of the Regional Nodes Positive field.

V.5.1	Stage at Diagnosis	<p>Stage at Diagnosis is not required with cases diagnosed on or after January 1, 1994. Hospitals wishing to do so may continue its use. V.6.1	Tumor Marker 1	<p>For breast cancer cases (C50.0-C50.9) diagnosed on or after 1/1/90 and prostate (C61.9) and testicular (C62.0-C62.9) cancer cases diagnosed on or after 1/1/98. For colorectal cancer cases - Carcinoembryonic Antigen (CEA). For ovarian cancer cases - Carbohydrate Antigen 125 (CA-125). Refer to Section V.6.1 for codes.</p>
-------	----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

For cases diagnosed January 1, 2004 forward, Tumor Markers 1-3 will be collected in the Collaborative Staging Site Specific Factor fields.

V.6.2	Tumor Marker 2	<p>For breast cancer cases (C50.0-C50.9) diagnosed on or after 1/1/90 and prostate (C61.9) and testicular (62.0-62.9) cancer cases diagnosed on or after 1/1/98. Refer to Section V.6.2 for codes.</p>
-------	----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

For cases diagnosed January 1, 2004 forward, Tumor Markers 1-3 will be collected in the Collaborative Staging Site Specific Factor fields.

V.6.3	Tumor Marker 3	<p>For testicular cancer cases diagnosed on or after 1/1/98. Refer to Section V.6.3 for codes.</p>
-------	----------------	----------------------------------------------------------------------------------------------------

For cases diagnosed January 1, 2004 forward, Tumor Markers 1-3 will be collected in the Collaborative Staging Site Specific Factor fields.

V.6.4	Tumor Marker-CA-1	<p>Her 2/neu tumor marker for breast cancer. Refer to Section V.6.4 for codes.</p>

Death Information

VII.2.13 Place of Death

If the patient has died, enter the code for the state or country where the death occurred in the Place of Death field. (The code for California is 097. See Appendices C and D for other codes.)

If the patient is still alive, use code 997.

VII.2.13	Cause of Death	Four-digit ICD code; not coded by hospitals
VII.2.13	DC State File Number	Six-digit number; not entered by hospital

APPENDIX J

PATIENT INFORMATION SHEET

CCR suggests the following statement be used by hospitals and physicians in notifying their patients that cancer is a reportable disease:

CALIFORNIA CANCER REPORTING SYSTEM

PATIENT INFORMATION SHEET

California Department of Health Services (CDHS) is mandated under state law (Health and Safety Code, Section 103885) to gather information on the amount and type of cancer occurring throughout the state. The purpose of the law is to help identify preventable causes of cancer.

For the system to be useful, it must obtain complete and accurate counts of all new cancers that occur. Therefore the new law requires hospitals and physicians to notify the appropriate regional registry of each new case of cancer.

The information collected is confidential under California Health and Safety Code Sections 100330 and 103885, Civil Code, Sections 56.05 and 1798, Government Code, Sections 6250-62-65, and Federal Law PL 104-191. CDHS has more than 50 years' experience in handling confidential records. Laws, regulations and programmatic safeguards are in place throughout the system to assure that the identities of patients are not revealed. Some cancer patients may, however, be contacted later by CDHS or the regional cancer registries as part of their ongoing investigations into the causes of cancer.

APPENDIX K

SCREENING LIST OF ICD-9-CM CODES FOR CASEFINDING

Certain ICD-9-CM* codes used by medical records departments for discharge diagnoses identify cases of malignant neoplasms that are reportable to the California Cancer Registry. Case finding procedures should include the review of medical records coded with the following numbers. Newly reportable diseases are followed by the ICD-O-3 morphology and behavior code in parentheses.

**ICD-9-CM*
CODE**

042	AIDS (review cases for AIDS-related malignancies)
140.0-208.9	Malignant neoplasms (primary and secondary)
203.1	Plasma cell leukemia (9733/3)
205.1	Chronic neutrophilic leukemia (9963/3)
225.0-227.4	Benign central nervous system neoplasms
230.0-234.9	Carcinoma in situ
235.0-238.9	Neoplasms of uncertain behavior
236.2	Ovarian neoplasms of uncertain behavior (8442/1, 8451/1, 8462/1, 8472/1, 8473/1)
237.0-237.9	Central nervous system neoplasms of uncertain behavior
238.4	Polycythemia vera (9950/3)
238.6	Solitary plasmacytoma (9731/3)
238.6	Extramedullary plasmacytoma (9734/3)
238.7	Chronic myeloproliferative disease (9960/3)
238.7	Myelosclerosis with myeloid metaplasia (9961/3)
238.7	Essential thrombocythemia (9962/3)
238.7	Refractory cytopenia with multilineage dysplasia (9985/3)
238.7	Myelodysplastic syndrome with 5q-syndrome (9986/3)
238.7	Therapy-related myelodysplastic syndrome (9987/3)
239.0-239.9	Neoplasms of unspecified nature
273.2	Gamma heavy chain disease
	Franklin's disease
273.3	Waldenstrom's macroglobulinemia
273.9	Unspecified disorder of plasma protein metabolism (screen for potential 273.3 miscodes)
284.9	Refractory anemia (9980/3)
285.0	Refractory anemia with ringed sideroblasts (9982/3)
285.0	Refractory anemia with excess blasts (9983/3)
285.0	Refractory anemia with excess blasts in transformation (9984/3)
288.3	Hypereosinophilic syndrome (9964/3)
289.8	Acute myelofibrosis (9932/3)
V07.3	Other prophylactic chemotherapy
V07.8	Other specified prophylactic measures
V10.0-V10.9	Personal history of malignant neoplasms
V58.0	Radiotherapy session
V58.1	Maintenance chemotherapy
V66.1	Convalescence following radiotherapy
V66.2	Convalescence following chemotherapy
V67.1	Follow-up exam following radiotherapy
V67.2	Follow-up exam following chemotherapy
V71.1	Observation for suspected malignant neoplasm
V76.0-V76.9	Special screening for malignant neoplasms

Please Note:

- Code 042 is not a combination code of AIDS with specified malignancies.
- Prostatic Intraepithelial Neoplasia (PIN III), morphology code 8148/2 is not reportable to the CCR.
- Pilocytic/juvenile astrocytoma, morphology code 9421, is reportable as a /3 behavior code and is assigned a regular tumor sequence number per SEER requirements, effective with cases diagnosed 1/1/2001 and forward.
- Ovarian borderline cystadenomas, morphology codes 8442/1, 8451/1, 8462/1, 8472/1 and 8473/1, which changed behavior codes from /3 to /1 will continue to be reportable to the CCR. These tumors are to be sequenced following the American College of Surgeons guideline for benign tumors.

Appendix O: Spanish Surnames

APPENDIX O

1980 CENSUS LIST OF SPANISH SURNAMES

Instructions for Using 1980 Census List of Spanish Surnames

This list can be used to code last names in most areas of the United States.

- All names are listed alphabetically in upper-case letters without any blanks or spaces. For example, names such as "De Leon," "De la Torre," or "La Luz" are shown as "DELEON," "DELATORRE," or "LALUZ."
- Spanish surnames often have accent marks (´) or a tilde (~) over the n (ñ). Disregard accent marks or tildes as these marks have been omitted from the list. For example, the names "Martínez" with an accent (´) and "Nuñez" with a tilde (~) are listed as "MARTINEZ" and "NUNEZ."
- If a surname consists of two names, separated by a dash or a space, code the person as Spanish if either name appears on the list. For example, for "Collins-Garcia," check "COLLINS" on the list. Since it does not appear, check for "GARCIA." If the name appeared as 'Garcia-Collins,' then "GARCIA" would be checked first.
- If the surname is of the form "Lopez R.," ignore the initial and look up the name, "LOPEZ."
- If the surname consists of two surnames separated by "de" such as "Perez de Seda," first look up the name written first, i.e., "PEREZ;" if it is not on the list, look up the final name including the word "de," i.e., "DESEDA;" if it is still not on the list, look up the final name without the word "de," i.e., "SEDA."
- Surnames written with spaces which begin "de," "de la," or "del," such as "de la Cruz," should be looked up with and without the prefix words, i.e., "CRUZ," "LACRUZ," and "DELACRUZ." If any of the combinations is listed, the surname should be considered Spanish.

SURGICAL APPROACH

Codes

- 0 None; no cancer-directed surgery of primary site
- 1 Endoscopy, NOS
- 2 Not image guided
- 3 Image guided
- 4 Open, NOS
- 5 Not assisted by endoscopy
- 6 Assisted by endoscopy
- 9 Unknown; not stated; death certificate **only**

SURGERY OF PRIMARY SITE

Codes

- 00 None; no cancer-directed surgery of primary site
- 10 Local tumor destruction, NOS (**without pathology specimen**)
 - 11 Photodynamic therapy (PDT)

PDT: Exposing photo-sensitive drugs to specific wave lengths of light in the presence of oxygen causing drug to become cytotoxic.

- 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
- 13 Cryosurgery
- 14 Laser

No specimen sent to pathology from this surgical event.

Procedures in codes 20-27 include, but are not limited to: Shave; Wedge resection

- 20 Local tumor excision, NOS (**with pathology specimen**)
 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
 - 25 Laser excision
 - 26 Polypectomy
 - 27 Excisional biopsy

Specimen sent to pathology from this surgical event.

Procedures in code 30 include, but are not limited to: Hemiglossectomy; Partial glossectomy

- 30 Wide excision, NOS

Procedures in codes 40-43 include, but are not limited to: Radical glossectomy

- 40 Radical excision of tumor, NOS
 - 41 Radical excision of tumor **only**
 - 42 Combination of 41 **with** en bloc mandibulectomy (marginal, segmental, hemi , or total)
 - 43 Combination of 41 **with** en bloc maxillectomy (partial, subtotal, total)
- 90 Surgery, NOS
- 99 Unknown if cancer-directed surgery performed; death certificate **only**

SURGICAL MARGINS

Codes

- 0 All margins grossly and microscopically negative
- 1 Margins involved, NOS
 - 2 Microscopic involvement
 - 5 Macroscopic involvement
- 7 Margins not documented
- 8 No cancer-directed surgery of primary site
- 9 Unknown whether margins were involved or negative; death certificate **only**

SCOPE OF REGIONAL LYMPH NODE SURGERY

Regional cervical lymph nodes are:
Caudal jugular (deep cervical)
Cranial jugular (deep cervical)
Dorsal cervical (superficial cervical)
Medial jugular (deep cervical)
Occipital
Paratracheal (anterior cervical)
Prelaryngeal (anterior cervical)
Retroauricular (mastoid, posterior auricular)
Submandibular (submaxillary)
Submental
Supraclavicular

Codes

- 0 No regional lymph nodes removed
- 1 Regional lymph node(s) removed, NOS
 - 2 Neck dissection, NOS
 - 3 Selective, limited; nodal sampling; "berry picking"
 - 4 Modified/modified radical
 - 5 Radical
- 9 Unknown; not stated; death certificate **only**

Terminology of neck dissection (Robbins et al. 1991): A radical neck dissection includes the removal of all ipsilateral cervical lymph node groups, i.e., lymph nodes from levels I through V (submental, submandibular, cranial jugular, medial jugular, caudal jugular, dorsal cervical nodes along the accessory nerve, and supraclavicular), and removal of the spinal accessory nerve, internal jugular vein and sternocleidomastoid muscle. In a modified radical neck dissection the same lymph nodes are removed as in a radical neck dissection; however, one or more non lymphatic structures are preserved. A selective neck dissection preserves one or more lymph node groups routinely removed in radical neck dissection.

NUMBER OF REGIONAL LYMPH NODES EXAMINED**Codes**

- 00 No regional lymph nodes removed
- 01 One regional lymph node removed
- 02 Two regional lymph nodes removed
- ..
- 90 Ninety or more regional lymph nodes removed
- 95 No regional lymph node(s) removed but aspiration of regional lymph node(s) was performed
- 96 Regional lymph node removal documented as a sampling and number of lymph nodes unknown/not stated
- 97 Regional lymph node removal documented as dissection and number of lymph nodes unknown/not stated

SCOPE OF REGIONAL LYMPH NODE SURGERY

Regional cervical lymph nodes are:
Buccal (facial)
Caudal jugular (deep cervical)
Cranial jugular (deep cervical)
Dorsal cervical (superficial cervical)
Medial jugular (deep cervical)
Occipital

Paratracheal (anterior cervical)
Parotid
Prelaryngeal (anterior cervical)
Retroauricular (mastoid, posterior auricular)
Retropharyngeal
Submandibular (submaxillary)
Submental
Supraclavicular

- 9 Unknown; not stated; death certificate **only**

Terminology of neck dissection (Robbins et al. 1991): A radical neck dissection includes the removal of all ipsilateral cervical lymph node groups, i.e., lymph nodes from levels I through V (submental, submandibular, cranial jugular, medial jugular, caudal jugular, dorsal cervical nodes along the accessory nerve, and supraclavicular), and removal of the spinal accessory nerve, internal jugular vein and sternocleidomastoid muscle. In a modified radical neck dissection, the same lymph nodes are removed as in a radical neck dissection; however, one or more nonlymphatic structures are preserved. A selective neck dissection preserves one or more lymph node groups routinely removed in radical neck dissection.

Code 30, partial gastrectomy, includes a sleeve resection of the stomach: Billroth I: anastomosis to duodenum (duodenostomy); Billroth II: anastomosis to jejunum (jejunostomy)

- 30 Gastrectomy, NOS (partial, subtotal, hemi-)
 - 31 Antrectomy, lower (distal)
- 32 Lower (distal) gastrectomy (partial, subtotal, hemi-)
- 33 Upper (proximal) gastrectomy (partial, subtotal, hemi-)
- 40 Near total or total gastrectomy

Resection of less than 40% of stomach

A total gastrectomy may follow a previous partial resection of the stomach.

- 50 Gastrectomy, NOS **with** removal of a portion of esophagus
 - 51 Partial or subtotal gastrectomy
 - 52 Near total or total gastrectomy
- 60 Gastrectomy **with** en bloc resection of other organs, NOS
 - 61 Partial or subtotal gastrectomy **with** en bloc resection
 - 62 Near total or total gastrectomy **with** en bloc resection (near total = 80% resection)
 - 63 Radical gastrectomy **with** en bloc resection

En bloc resection is the removal of organs in one piece at one time and may include an omentectomy.

 - 27 Excisional biopsy

Specimen sent to pathology from this surgical event.

Procedures coded 30-31 include, but are not limited to: Appendectomy (for an appendix primary only); Enterocolectomy; Ileocolectomy; Partial colectomy, NOS; Partial resection of transverse colon and flexures; Segmental resection, e.g., cecectomy; Sigmoidectomy

- 30 Partial colectomy, but less than hemicolectomy
- 31 Partial colectomy **with** permanent colostomy (Hartmann's operation)

Also code colostomy in the data item Reconstruction/Restoration.

- 40 Hemicolectomy or greater (but less than total); right or left colectomy
A hemicolectomy is the removal of total right or left colon and a portion of transverse colon.
- 50 Total colectomy

Removal of colon from cecum to the rectosigmoid or a portion of the rectum.

60 Total proctocolectomy

Commonly used for familial polyposis or polyposis coli.

70 Colectomy or coloproctectomy **with** an en bloc resection of other organs; pelvic exenteration

Code 70 includes any colectomy (partial, hemicolectomy, or total) **with** an en bloc resection of any other organs. The other organs may be partially or totally removed. Procedures that may be a **part of an en bloc resection** include, but are not limited to: oophorectomy, partial proctectomy, rectal mucosectomy **En bloc** resection is the removal of organs in one piece at one time.

The creation of ileal reservoir which is a part of a pelvic exenteration **must also be coded** in the data item Reconstruction/Restoration.

80 Colectomy, NOS

SCOPE OF REGIONAL LYMPH NODE SURGERY

The pathology report often describes regional lymph nodes by their anatomic location: colic nodes; mesenteric nodes; peri-\epi-\para-\ colic. Regional lymph nodes differ for each anatomical subsite. The following list identifies the regional lymph nodes for each subsite of the colon:	
Cecum and appendix	Anterior cecal Ileocolic Posterior cecal Right colic
Ascending colon	Ileocolic Middle colic Right colic
Hepatic flexure	Middle colic Right colic
Transverse colon	Middle colic

Splenic flexure	Inferior mesenteric Middle colic, left colic
Descending colon	Inferior mesenteric Left colic Sigmoid
Sigmoid colon	Inferior mesenteric Sigmoid mesenteric Sigmoidal Superior rectal(hemorrhoidal)

Superior mesenteric, external iliac and common iliac nodes are distant lymph nodes. **Code** the removal of any of these nodes in the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

Terminology of neck dissection (Robbins et al. 1991): A radical neck dissection includes the removal of all ipsilateral cervical lymph node groups, i.e., lymph nodes from levels I through V (submental, submandibular, cranial jugular, medial jugular, caudal jugular, dorsal cervical nodes along the accessory nerve, and supraclavicular), and removal of the spinal accessory nerve, internal jugular vein and sternocleidomastoid muscle. In a modified radical neck dissection the same lymph nodes are removed as in a radical neck dissection; however, one or more nonlymphatic structures are preserved. A selective neck dissection preserves one or more lymph node groups routinely removed in radical neck dissection.

SCOPE OF REGIONAL LYMPH NODE SURGERY

Regional lymph nodes are different for each anatomical subsite.

Head, neck	Cervical, ipsilateral preauricular, submandibular, and supraclavicular
Thorax	Ipsilateral axillary
Arm	Ipsilateral epitrochlear and axillary
Abdomen, loins, and buttocks	Ipsilateral inguinal
Anal margin and perianal skin	Ipsilateral inguinal
Leg	Ipsilateral inguinal and popliteal

There are **boundary zones between the subsites** (i.e., between the thorax and arm, the boundary zone is the shoulder and axilla). The boundary zones do not belong to either subsite. If a tumor originates in one of these 4 cm boundary zones, the nodes on either side of the bands are regional.

BETWEEN THE SUBSITES		THE BOUNDARY ZONE IS
Head and neck AND	Thorax	Clavícula-acromion-upper shoulder blade edge
Thorax AND	Arm	Shoulder-axilla-shoulder
Thorax AND	Abdomen, loins, and buttocks	Front: Middle between navel and costal arch Back: Lower border of thoracic vertebrae (midtransverse axis)
Abdomen, loins, and buttock AND	Leg	Groin-trochanter-gluteal sulcus
Right AND	Left	Midline

Iliac, other pelvic, abdominal or intrathoracic lymph nodes are distant. Code the removal of these nodes under the data item, Surgery of Other Regional Site(s), Distant Site(s), or Distant Node(s).

Codes

- 0 No regional lymph nodes removed
- 1 Sentinel node, NOS

A sentinel node is the first node to receive drainage from a primary tumor. It is identified by an injection of a dye or radio label at the site of the primary tumor

SURGERY OF PRIMARY SITE

Codes

- 00 None; no cancer-directed surgery of primary site

Procedures coded as 10-17 remove the gross primary tumor and some of the breast tissue (breast conserving or preserving). There may be microscopic residual tumor.

- 10 Partial mastectomy, NOS; less than total mastectomy, NOS
 - 11 Nipple resection
 - 12 Lumpectomy or excisional biopsy
 - 13 Reexcision of the biopsy site (usually for gross or microscopic residual disease)
 - 14 Wedge resection
 - 15 Quadrantectomy
 - 16 Segmental mastectomy
 - 17 Tylectomy
- 30 Subcutaneous mastectomy

A subcutaneous mastectomy is the removal of breast tissue without the nipple and areolar complex or overlying skin. **This procedure is rarely performed to treat malignancies.**

- 40 Total (simple) mastectomy, NOS
 - 41 **without** removal of uninvolved contralateral breast
 - 42 **with** removal of uninvolved contralateral breast

A simple mastectomy removes all breast tissue, the nipple, and areolar complex. An axillary dissection is not done. For single primaries only, code removal of involved contralateral breast under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

- 50 Modified radical mastectomy
 - 51 **without** removal of uninvolved contralateral breast
 - 52 **with** removal of uninvolved contralateral breast

Removes all breast tissue, the nipple, the areolar complex, and variable amounts of breast skin. The procedure involves an en bloc resection of the axilla. The specimen may or may not include a portion of the pectoralis major muscle. Includes an en bloc axillary dissection. For single primaries only, code removal of involved contralateral breast under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

- 60 Radical mastectomy, NOS
 - 61 **without** removal of uninvolved contralateral breast
 - 62 **with** removal of uninvolved contralateral breast

Removal of breast tissue, nipple, areolar complex, a variable amount of skin, pectoralis minor, and pectoralis major. Includes an en bloc axillary dissection. For single primaries only, code removal of involved contralateral breast under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

- 70 Extended radical mastectomy
 - 71 **without** removal of uninvolved contralateral breast
 - 72 **with** removal of uninvolved contralateral breast

Removal of breast tissue, nipple, areolar complex, variable amounts of skin, pectoralis minor, and pectoralis major. Includes removal of internal mammary nodes and an en bloc axillary dissection. For single primaries only, code removal of involved contralateral breast under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

- 80 Mastectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if cancer-directed surgery performed; death certificate **only**

SURGICAL MARGINS

Since the codes are hierarchical, if more than one code is applicable, use the numerically higher code. For example, if multiple margins are microscopically and macroscopically involved, code the macroscopic involvement(s).

Multiple margins are two separate margins, both of which are microscopically involved with tumor. **Do not code** multiple margins (4) if **one margin** has multiple foci of tumor.

Codes

- 0 All margins grossly and microscopically negative
- 1 Margins involved, NOS
 - 2 Microscopic involvement
 - 3 Single margin
 - 4 Multiple margins
 - 5 Macroscopic involvement
- 7 Margins not documented

Debulking is a partial removal of the tumor mass and can involve the removal of multiple organ sites. It may include removal of ovaries and/or the uterus (a hysterectomy). The pathology report

may or may not identify ovarian tissue. A debulking is usually followed by another treatment modality such as chemotherapy.

70 Pelvic exenteration, NOS

71 Anterior

Includes bladder, distal ureters, and genital organs **with** their ligamentous attachments and pelvic lymph nodes. The removal of pelvic lymph nodes is also coded under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

72 Posterior

Includes rectum and rectosigmoid **with** ligamentous attachments and pelvic lymph nodes. The removal of pelvic lymph nodes is also coded under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

73 Total

Includes removal of all pelvic contents and pelvic lymph nodes. The removal of pelvic lymph nodes is also coded under the data item Surgery of Other Regional Site(s), Distant Site(s), or Distant Lymph Node(s).

74 Extended

Includes pelvic blood vessels or bony pelvis.

80 (Salpingo) oophorectomy, NOS

90 Surgery, NOS

99 Unknown if cancer-directed surgery performed; death certificate **only**

SURGICAL MARGINS

For this site only, this field will describe the residual tumor burden after cancer-directed surgery.

Codes

0 No visible residual tumor

1 Visible residual tumor, NOS

2 Visible residual tumor, cumulative maximum of less than 1 cm

3 Visible residual tumor, cumulative maximum of at least 1 cm, not more than 2 cm

4 Visible residual tumor, cumulative maximum of more than 2 cm

8 No cancer directed surgery of primary site

9 Unknown whether visible residual tumor was present; death certificate **only**

SCOPE OF REGIONAL LYMPH NODE SURGERY

The regional lymph nodes are:
Common iliac
External iliac
Hypogastric (obturator)
Inguinal
Lateral sacral
Paraortic
Pelvic, NOS

Retroperitoneal, NOS

Codes

 - 17 Other method of local resection or destruction
- 30 Subtotal or simple prostatectomy, NOS

A segmental resection or enucleation leaving the capsule intact.

- 40 Less than total prostatectomy, NOS

An enucleation using an instrument such as a Vaprotrode which may leave all or part of the capsule intact.

- 50 Radical prostatectomy, NOS; total prostatectomy, NOS

Excised prostate, prostatic capsule, ejaculatory ducts, seminal vesicle(s) and may include a narrow cuff of bladder neck.

- 70 Prostatectomy **with** en bloc resection of other organs; pelvic exenteration

Surgeries coded 70 are any prostatectomy **with** an en bloc resection of any other organs. The other organs may be partially or totally removed. **En bloc resection** is the removal of organs in one piece at one time. Procedures that may involve an en bloc resection include, but are not limited to: cystoprostatectomy, radical cystectomy and prostatectomy.

SURGICAL MARGINS

The codes are hierarchical, if more than one code is applicable, use the numerically higher code. For example, if multiple margins are microscopically and macroscopically involved, code the macroscopic involvement (5).

Multiple margins are two separate margins, both of which are microscopically involved with tumor. **DO NOT CODE** multiple margins (4) if one margin has multiple foci of tumor.

Codes

- 0 All margins grossly and microscopically negative
- 1 Margin(s) involved, NOS

SCOPE OF REGIONAL LYMPH NODE SURGERY

The regional lymph nodes are the cervical and upper mediastinal lymph nodes.

Terminology of neck dissection (Robbins et al. 19): A radical neck dissection includes the removal of all ipsilateral cervical lymph node groups, i.e., lymph nodes from levels I through V (submental, submandibular, cranial jugular, medial jugular, caudal jugular, dorsal cervical nodes along the accessory nerve, and supraclavicular), and removal of the spinal accessory nerve, internal jugular vein and sternocleidomastoid muscle. In a modified radical neck dissection the same lymph nodes are removed as in a radical neck dissection; however, one or more non lymphatic structures are preserved. A selective neck dissection is a neck dissection with preservation of one or more lymph nodes group routinely removed in radical neck dissection.

Codes

- 0 All margins grossly and microscopically negative

- 1 Margins involved, NOS
 - 2 Microscopic involvement
 - 5 Macroscopic involvement
- 7 Margins not documented
- 8 No cancer-directed surgery of primary site
- 9 Unknown whether margins were involved or negative; death certificate **only**

SCOPE OF REGIONAL LYMPH NODE SURGERY

Codes

- 0 No regional lymph nodes removed
- 1 Regional lymph node(s) removed, NOS
- 9 Unknown; not stated; death certificate **only**

NUMBER OF REGIONAL LYMPH NODES EXAMINED

Codes

- 00 No regional lymph nodes removed
- 01 One regional lymph node removed
- 02 Two regional lymph nodes removed
- ..
- 90 Ninety or more regional lymph nodes removed
- 95 No regional lymph node(s) removed but aspiration of regional lymph node(s) was performed
- 96 Regional lymph node removal documented as a sampling and number of lymph nodes unknown/not stated
- 97 Regional lymph node removal documented as dissection and number of lymph nodes unknown/not stated
- 98 Regional lymph nodes surgically removed but number of lymph nodes unknown/not stated and not documented as sampling or dissection
- 99 Unknown; not stated; death certificate **only**

SURGERY OF OTHER REGIONAL SITE(S), DISTANT SITE(S) OR DISTANT LYMPH NODE(S)

Codes

- 0 None; no surgery to other regional or distant sites
- 1 Surgery to other site(s) or node(s), NOS; unknown if regional or distant
 - 2 Other regional sites
 - 3 Distant lymph node(s)
 - 4 Distant site(s)
 - 5 Combination of 4 **with** 2 or 3
- 9 Unknown; not stated; death certificate **only**

RECONSTRUCTION/RESTORATION - FIRST COURSE

Codes

- 9 At this time, reconstructive procedures are not being collected for these sites

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
- 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
- 26 Polypectomy
 - 27 Excisional biopsy
- Any combination of 20 or 26-27 WITH

[SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

- 21 Photodynamic therapy (PDT)
- 22 Electrocautery
- 23 Cryosurgery
- 24 Laser ablation

25 Laser excision

Specimen sent to pathology from surgical events 20-27.

[SEER Guideline: Codes 20-27 include shave and wedge resection]

30 Wide excision, NOS

Code 30 includes:

- Hemiglossectomy
- Partial glossectomy

40 Radical excision of tumor, NOS

41 Radical excision of tumor ONLY

42 Combination of 41 WITH resection in continuity with mandible (marginal, segmental, hemi-, or total resection)

43 Combination of 41 WITH resection in continuity with maxilla (partial, subtotal, or total resection)

[SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]

Codes 40-43 include:

- Total glossectomy
- Radical glossectomy

90 Surgery, NOS

99 Unknown if surgery performed; death certificate ONLY

PAROTID AND OTHER UNSPECIFIED GLANDS

Parotid Gland C07.9, Major Salivary Glands C08.0-C08.9

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Codes

00 None; no surgery of primary site; autopsy ONLY

10 Local tumor destruction, NOS

- 11 Photodynamic therapy (PDT)
- 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
- 13 Cryosurgery
- 14 Laser

No specimen sent to pathology from surgical events 10-14.

20 Local tumor excision, NOS

- 26 Polypectomy
- 27 Excisional biopsy

Any combination of 20 or 26-27 WITH

[SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

- 21 Photodynamic therapy (PDT)
- 22 Electrocautery
- 23 Cryosurgery
- 24 Laser ablation

25 Laser excision

Specimen sent to pathology from surgical events 20-27.

30 Less than total parotidectomy, NOS; less than total removal of major salivary gland, NOS

- 31 Facial nerve spared
- 32 Facial nerve sacrificed

- 33 Superficial lobe ONLY
 - 34 Facial nerve spared
 - 35 Facial nerve sacrificed
- 36 Deep lobe (Total)
 - [SEER Guideline: with or without superficial lobe]
 - 37 Facial nerve spared
 - 38 Facial nerve sacrificed
- 40 Total parotidectomy, NOS; total removal of major salivary gland, NOS
 - 41 Facial nerve spared
 - 42 Facial nerve sacrificed
- 50 Radical parotidectomy, NOS; radical removal of major salivary gland, NOS
 - 51 WITHOUT removal of temporal bone
 - 52 WITH removal of temporal bone
 - 53 WITH removal of overlying skin (requires graft or flap coverage)
- 80 Parotidectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

PHARYNX

Tonsil C09.0-C09.9, Oropharynx C10.0-C10.9, Nasopharynx C11.0-C11.9, Pyriform Sinus C12.9, Hypopharynx C13.0-C13.9, Pharynx C14.0

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
 - 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
 - 15 Stripping

No specimen sent to pathology from surgical events 10-15.
- 20 Local tumor excision, NOS
 - 26 Polypectomy
 - 27 Excisional biopsy

Any combination of 20 or 26-27 WITH
 [SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
 - 25 Laser excision
 - 28 Stripping

Specimens sent to pathology from surgical events 20-28.
- 30 Pharyngectomy, NOS
 - 31 Limited/partial pharyngectomy; tonsillectomy, bilateral tonsillectomy
 - 32 Total pharyngectomy
- 40 Pharyngectomy WITH laryngectomy OR removal of contiguous bone tissue, NOS (does NOT include total mandibular resection)
 - [SEER Guideline: code 40 includes mandibulectomy (marginal, segmental, hemi-, and/or laryngectomy) NOS]
 - [SEER Guideline: contiguous bone tissue refers to the mandible]

- 41 WITH Laryngectomy (laryngopharyngectomy)
- 42 WITH bone
- 43 WITH both 41 and 42
- 50 Radical pharyngectomy (includes total mandibular resection), NOS
 - 51 WITHOUT laryngectomy
 - 52 WITH laryngectomy
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

ESOPHAGUS

C15.0-C15.9

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
 - 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
 - 26 Polypectomy
 - 27 Excisional biopsy

Any combination of 20 or 26-27 WITH
 [SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
- 25 Laser excision
- Specimen sent to pathology from surgical events 20-27.**
- 30 Partial esophagectomy
- 40 Total esophagectomy, NOS
- 50 Esophagectomy, NOS WITH laryngectomy and/or gastrectomy, NOS
 [SEER Guideline: esophagectomy may be partial, total, or NOS]
 - 51 WITH laryngectomy
 - 52 WITH gastrectomy, NOS
 - 53 Partial gastrectomy
 - 54 Total gastrectomy
 - 55 Combination of 51 WITH any of 52-54
- 80 Esophagectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

STOMACH

C16.0-C16.9

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
 - 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
 - 26 Polypectomy
 - 27 Excisional biopsy

Any combination of 20 or 26-27 WITH
 [SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
- 25 Laser excision
- Specimen sent to pathology from surgical events 20-27.**
- 30 Gastrectomy, NOS (partial, subtotal, hemi-)
 - 31 Antrectomy, lower (distal-less than 40% of stomach)***
 - 32 Lower (distal) gastrectomy (partial, subtotal, hemi-)
 - 33 Upper (proximal) gastrectomy (partial, subtotal, hemi-)
- Code 30 includes:**
 - Partial gastrectomy, including a sleeve resection of the stomach
 - Billroth I: anastomosis to duodenum (duodenostomy)
 - Billroth II: anastomosis to jejunum (jejunostomy)
- 40 Near-total or total gastrectomy, NOS
 - 41 Near-total gastrectomy
 - 42 Total gastrectomy
- A total gastrectomy may follow a previous partial resection of the stomach.**
- 50 Gastrectomy, NOS WITH removal of a portion of esophagus
 - 51 Partial or subtotal gastrectomy
 - 52 Near total or total gastrectomy
- Codes 50-52 are used for gastrectomy resection when only portions of esophagus are included in procedure.**
- 60 Gastrectomy with a resection in continuity with the resection of other organs, NOS***
 - 61 Partial or subtotal gastrectomy, in continuity with the resection of other organs***
 - 62 Near total or total gastrectomy, in continuity with the resection of other organs***
 - 63 Radical gastrectomy, in continuity with the resection of other organs***
- Codes 60-63 are used for gastrectomy resections with organs other than esophagus. Portions of esophagus may or may not be included in the resection.**
 [SEER Guideline: codes 60-63 may include omentectomy]
 [SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]
- 80 Gastrectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

*** Incidental splenectomy NOT included

COLON**C18.0-C18.9**

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Code removal/surgical ablation of single or multiple liver metastases under the data item *Surgical Procedure/Other Site* (NAACCR Item #1294).

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
- 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
- 27 Excisional biopsy
 - 26 Polypectomy, NOS
 - 28 Polypectomy-endoscopic
 - 29 Polypectomy-surgical excision
- Any combination of 20 or 26-29 WITH
[SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy (NOS, endoscopic or surgical excision) or excisional biopsy]
- 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
- 25 Laser excision
- Specimen sent to pathology from surgical events 20-29.**
- 30 Partial colectomy, segmental resection
- 32 Plus resection of contiguous organ; example: small bowel, bladder
[SEER Guideline: codes 30-32 include but are not limited to: appendectomy (for an appendix primary only), enterocolectomy, ileocolectomy, partial colectomy, NOS, partial resection of transverse colon and flexures, segmental resection, e.g., cecectomy, sigmoidectomy]
- 40 Subtotal colectomy/hemicolectomy (total right or left colon and a portion of transverse colon)
- 41 Plus resection of contiguous organ; example: small bowel, bladder
- 50 Total colectomy (removal of colon from cecum to the rectosigmoid junction; may include a portion of the rectum)
- 51 Plus resection of contiguous organ; example: small bowel, bladder
- 60 Total proctocolectomy (removal of colon from cecum to the rectosigmoid junction, including the entire rectum)
[SEER Guideline: commonly used for familial polyposis or polyposis coli]
- 61 Plus resection of contiguous organ; example: small bowel, bladder
- 70 Colectomy or coloproctectomy with resection of contiguous organ(s), NOS (where there is not enough information to code 32, 41, 51, or 61)
- Code 70 includes:** Any colectomy (partial, hemicolectomy, or total) WITH a resection of any other organs in continuity with the primary site. Other organs may be partially or totally removed. Other organs may include, but are not limited to, oophorectomy, partial proctectomy, rectal mucosectomy, or pelvic exenteration.
[SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]
- 80 Colectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

RECTOSIGMOID

C19.9

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Code removal/surgical ablation of single or multiple liver metastases under the data item *Surgical Procedure/Other Site* (NAACCR Item #1294).

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
 - 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser ablation
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
 - 26 Polypectomy
 - 27 Excisional biopsy

Any combination of 20 or 26-27 WITH
[SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
- 25 Laser excision
- Specimen sent to pathology from surgical events 20-27.**
- 30 Wedge or segmental resection; partial proctosigmoidectomy, NOS
 - 31 Plus resection of contiguous organs; example: small bowel, bladder

Procedures coded 30 include, but are not limited to:

 - Anterior resection
 - Hartmann operation
 - Low anterior resection (LAR)
 - Partial colectomy, NOS
 - Rectosigmoidectomy, NOS
 - Sigmoidectomy
- 40 Pull through WITH sphincter preservation (colo-anal anastomosis)
[SEER Guideline: Procedures coded 40 include but are not limited to: Altemeier's operation, Duhamel's operation, Soave's submucosal resection, Swenson's operation, Turnbull's operation.]
- 50 Total proctectomy
[SEER Guideline: Procedures coded 50 include but are not limited to: abdominoperineal resection (A & P resection), anterior/posterior resection (A/P resection)/Mile's operation, Rankin's operation]
- 51 Total colectomy [SEER Guideline: removal of the colon from cecum to rectosigmoid or portion of rectum]
- 55 Total colectomy WITH ileostomy, NOS
 - 56 Ileorectal reconstruction
 - 57 Total colectomy WITH other pouch; example: Koch pouch
- 60 Total proctocolectomy, NOS [SEER Guideline: combination of 50 and 51]
 - 65 Total proctocolectomy WITH ileostomy, NOS
 - 66 Total proctocolectomy WITH ileostomy and pouch
- Removal of the colon from cecum to the rectosigmoid or a portion of the rectum.**
- 70 Colectomy or proctocolectomy resection in continuity with other organs; pelvic exenteration
[SEER Guideline: Procedures that may be part of an en bloc resection include, but are not limited to: an oophorectomy and a rectal mucosectomy. Code 70 includes any colectomy (partial, hemicolectomy or total) with an en bloc resection of any other organs. There may be partial or total removal of other organs in continuity with the primary.]
[SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]

- 80 Colectomy, NOS; Proctectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

RECTUM

C20.9

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Code removal/surgical ablation of single or multiple liver metastases under the data item *Surgical Procedure/Other Site* (NAACCR Item #1294).

Codes

- 00 None; no surgery of primary site; autopsy ONLY
- 10 Local tumor destruction, NOS
 - 11 Photodynamic therapy (PDT)
 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser
- No specimen sent to pathology from surgical events 10-14.**
- 20 Local tumor excision, NOS
 - 27 Excisional biopsy
 - 26 Polypectomy

Any combination of 20 or 26-27 WITH
 [SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]

 - 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
- 25 Laser excision
- 28 Curette and fulguration
- Specimen sent to pathology from surgical events 20-28.**
- 30 Wedge or segmental resection; partial proctectomy, NOS

Procedures coded 30 include, but are not limited to:

 - Anterior resection
 - Hartmanns operation
 - Low anterior resection (LAR)
 - Transsacral rectosigmoidectomy
- 40 Pull through WITH sphincter preservation (coloanal anastomosis)
 [SEER Guideline: Procedures coded 40 include but are not limited to: Altemeier's operation, Duhamel's operation, Soave's submucosal resection, Swenson's operation, Turnbull's operation.]
- 50 Total proctectomy

Procedure coded 50 includes, but is not limited to:

 - Abdominoperineal resection (Miles Procedure)

[SEER Guideline: also called anterior/posterior (A/P) resection/Mile's operation, Rankin's operation]
- 60 Total proctocolectomy, NOS
- 70 Proctectomy or proctocolectomy with resection in continuity with other organs; pelvic exenteration
 [SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]
- 80 Proctectomy, NOS
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

[SEER Guideline: the following codes INCLUDE local tumor excision, polypectomy or excisional biopsy]
- 21 Photodynamic therapy (PDT)
 - 22 Electrocautery
 - 23 Cryosurgery
 - 24 Laser ablation
 - 25 Laser excision
- Specimen sent to pathology from surgical events 20-27.**
[SEER Guideline: margins of resection may have microscopic involvement]
- 60 Abdominal perineal resection, NOS (APR; Miles procedure)
 - 61 APR and sentinel node excision
 - 62 APR and unilateral inguinal lymph node dissection
 - 63 APR and bilateral inguinal lymph node dissection
- The lymph node dissection should also be coded under Scope of Regional Lymph Node Surgery (NAACCR Item #1292) or Scope of Regional Lymph Node Surgery at This Facility (NAACCR Item #672).**
- 90 Surgery, NOS
 - 99 Unknown if surgery performed; death certificate ONLY
-

LIVER AND INTRAHEPATIC BILE DUCTS

C22.0-C22.1

(Except for M-9750, 9760-9764, 9800-9820, 9826, 9831-9920, 9931-9964, 9980-9989)

Codes

 - 12 Electrocautery; fulguration (includes use of hot forceps for tumor destruction)
 - 13 Cryosurgery
 - 14 Laser

- 15 Alcohol (Percutaneous Ethanol Injection-PEI)
- 16 Heat-Radio-frequency ablation (RFA)
- 17 Other (ultrasound, acetic acid)

No specimen sent to pathology from surgical events 10-17.

Clarification from ACOS: Chemoembolization should be coded as 10 - Local Tumor Destruction and in addition, should also be appropriately coded in the Chemotherapy field.

- 20 Wedge or segmental resection, NOS
 - 21 Wedge resection
 - 22 Segmental resection, NOS
 - 23 One
 - 24 Two
 - 25 Three
 - 26 Segmental resection AND local tumor destruction
- Specimen sent to pathology from surgical events 20-26.**
- 30 Lobectomy, [simple or] NOS
 - 36 Right lobectomy
 - 37 Left lobectomy
 - 38 Lobectomy AND local tumor destruction
- 50 Extended lobectomy, NOS (extended: resection of a single lobe plus a segment of another lobe)
 - 51 Right lobectomy
 - 52 Left lobectomy
 - 59 Extended lobectomy AND local tumor destruction
- 60 Hepatectomy, NOS [formerly SEER code 80]
 - 61 Total hepatectomy and transplant [formerly SEER code 70]
- 65 Excision of a bile duct (for an intra-hepatic bile duct primary only) [formerly SEER code 40]
 - 66 Excision of a bile duct PLUS partial hepatectomy
- 75 Bile duct and hepatectomy WITH transplant
- 90 Surgery, NOS
- 99 Unknown if surgery performed; death certificate ONLY

**PANCREAS
C25.0-C25.9**

- 75 Combined (Tissue and Implant)

A total (simple) mastectomy removes all breast tissue, the nipple, and areolar complex. An axillary dissection is not done.

For single primaries only, code removal of involved contralateral breast under the data item *Surgical Procedure/Other Site (NAACCR Item #1294) or Surgical Procedure/Other Site at This Facility (NAACCR Item #674)*.

If contralateral breast reveals a second primary, each breast is abstracted separately. The surgical procedure is coded 41 for the first primary. The surgical code for the contralateral breast is coded to the procedure performed on that site.

 - 63 Combined (Tissue and Implant)

Removal of all breast tissue, the nipple, the areolar complex, and variable amounts of breast skin in continuity with the axilla. The specimen may or may not include a portion of the pectoralis major muscle.

[SEER Guideline: in continuity with or "en bloc" means that all of the tissues were removed during the same procedure, but not necessarily in a single specimen]

[SEER Guideline: "tissue" for reconstruction is defined as human tissue such as muscle (latissimus dorsi or rectus abdominis) or skin in contrast to artificial prostheses (implants).]

If contralateral breast reveals a second primary, it is abstracted separately. The surgical procedure is coded 51 for the first primary. The surgical code for the contralateral breast is coded to the procedure performed on that site.

For single primaries only, code removal of involved contralateral breast under the data item *Surgical Procedure/Other Site (NAACCR Item #1294) or Surgical Procedure/Other Site at This Facility (NAACCR Item #674)*.

How to Use Prostate Extension Codes 33 and 34

Source: DSQC #2000-01 Guideline: Prostate Extension Codes 33 & 34, 01/24/00

The CCR realizes that medical record information is limited regarding tumors arising in or extending to the apex. In order for registrars to code extension consistently, the following operational rules apply. These rules apply to assigning both clinical and pathological extension codes.

Use code 33 when the apex is the only area identified as involved with tumor.

Example: Biopsy of the apex is positive for adenocarcinoma. Biopsies of right and left lobes are negative for malignancy.

Use code 34 when the apex and any other sections of the prostate are positive for tumor.

Example: Biopsies of left and right apex and left posterior lobe positive for adenocarcinoma.

Coding EOD for Non-Surgical Cases with Limited or Ambiguous Information

Source: DSQC #2000-02 Guideline: EOD for Non-Surgical Cases, 02/28/00

EOD coding works well for cases that are surgically treated such as colon and breast. EOD is not as accurate for cases that do not have a surgical resection. When EOD coding is based exclusively on clinical information (physical exam, scans, and scopes), the results may be interpreted differently. When clinical information is limited, and there is no physician staging, use the following guidelines.

LIVER

Use available information.

Example: Ultrasound of the liver showed a 2 cm. mass in the left lobe and a 3 cm. mass in the right lobe. Biopsy results stated hepatocellular carcinoma. No other work-up. Use code 65 rather than code 99.

LUNG

Lung primary with limited information and no MD staging.

If CT does not mention tumor outside lung, use extension code 10.

Note: CXR may not be used to determine tumor extension outside the lung.

Note: If there is no lung CT, tumor size can be coded from the CXR.

CT makes no mention of mediastinal adenopathy, follow the CCR 0 vs. 9 memo for the single digit lymph node code.

NODAL LYMPHOMA

Lymphoma primary with biopsy only, limited information, and no MD staging.

Physical exam must contain statement regarding all palpable lymph nodes or a statement such as "no other adenopathy", "examination within normal limits", or "remainder of exam within normal limits".

There must be a CT of chest and abdomen.

If the above two criteria are not in the medical record then use extension code 99.

Example: Patient presents with cervical mass, which is biopsied and positive for lymphoma. No other information in medical record. Code 99.

PANCREAS

Obstruction, NOS.

Carcinoma of the head of pancreas causes obstruction of the common bile duct. When there is no information to determine if the obstruction is caused by direct extension into the common bile duct or extrinsic obstruction due to an enlarging mass localized in the head of pancreas and surrounding the common bile duct, use code 99.

General Visual Editing Guidelines

Source: DSQC #2000-03 Guideline: General Visual Editing Guidelines, 02/28/00

The visual editor will not change a code and count a discrepancy unless standard cancer registry reference materials can support the change. These reference materials include:

- Volume 1, California Cancer Registry
- SEER Extent of Disease Manual
- ICD-O
- CCR Inquiry System
- SEER Inquiry System
- CCR/Data Standards and Quality Control Unit memos and guidelines imprinted with "Statewide Distribution"
- Volume 2, ROADS
- ACOS Inquiry and Response System

Ambiguous/Inconsistent Information

The registrar is responsible for clarifying ambiguous information. If there is conflicting information in the medical record, it is the responsibility of the registrar to try to obtain physician staging or clarification and to document this information on the abstract prior to submitting the abstract. If no further information was obtainable/available prior to submitting the abstract, the registrar should document on the abstract that no further information was available prior to submitting the abstract.

Example: When a CT mentions brain lesions, lytic lesions, adrenal masses, or other descriptions that may indicate metastases, and there is no physician statement to clarify the ambiguous description, the registrar must try to obtain physician staging or clarification and to document the outcome on the abstract before submitting the abstract.

Example: The physical examination states there is a lesion in the right cervical area. Op report states the lesion is on the left. CT scan states the lesion is on the right. The pathology report does not state which side the biopsy was taken from. The registrar should state in the remarks section "no further information available to determine on which side of the neck the lesion was located." Therefore, the primary site [or extension, lymph node EOD, etc.] was coded as unknown [or NOS].

Query vs. Discrepancy

If a code is not supported by documentation on the abstract, then it will be counted as a discrepancy.

Example: The abstract has the tumor size coded as 024, but there is no mention of the tumor size anywhere in the text of the abstract. Tumor size will be changed to 999 and this will be counted as a discrepancy.

If the registrar does not clarify ambiguous information, then it will be counted as a discrepancy.

Example: The abstract has the following information submitted: patient name as Mei Ling Chang, race as white, Spanish as Cuban. The region will query the registrar for correct race and Spanish code. In addition, this will be counted as a discrepancy since the registrar did not clarify the ambiguous information in the original text of the abstract.

New Information/Guidelines

New information regarding abstracting standards is sent by the CCR to the regional registries for distribution to all registrars. Discrepancies resulting from this new information will not be counted for one month (30 days) after statewide distribution. The Date Completed on the abstract will be the date the visual editor will use to calculate the 30 day time frame.

Example: The Guideline for Prostate Codes 33 and 34 has a January 24, 2000, Statewide Distribution date. Information contained in the guideline will not be counted as a discrepancy unless the Date Completed on the abstract is later than February 24, 2000.

Extension Code Unknown (99)

If you know the extent of the tumor is at least regional but are not sure if it is more than that, and there is no physician TNM, code to regional.

Example: Chest CT: 4 cm pleural based mass RUL with mediastinal adenopathy. Questionable mass right adrenal gland. If querying the physician for more information regarding stage has no results: code as regional rather than unknown.

Ambiguous Terms Not Listed in Vol. 1

If a term or description used is not included in the ambiguous terms for diagnosis or involvement in Vol. 1, page 87 and 98 or SEER EOD Code Manual, page 2, but the language is commonly understood to mean diagnostic or involvement, then accept the term or description.

Example: CT showed an 8 cm. mass in the right kidney that "must be considered a hypernephroma until proven otherwise." Interpret as diagnostic.

If a physician states that an organ is malignant and the only abnormal findings on a scope, scan, or operative report describe a mass, nodule(s) or lesion(s) in that organ, it can be assumed that the mass, nodules or lesions represent the malignancy.

Similarly, if a physician states that an organ is involved with metastasis, and the scope, scan or operative report only describes a mass, nodule(s) or lesion(s) in that organ, you can assume that the mass, nodules or lesions represent the metastasis.

Example: Chest CT: right pleural effusion; 2 lesions, one in RUL and one just inferior to this; nodules left lung in mid lung and 3 densities in LLL. FDX: metastatic lung ca.

Discussion: Assume that the nodules and densities are metastases and code extension as 78, contralateral lung.

Ambiguous TNM

In order to use the guideline for TNM in the SEER EOD manual, 3rd Edition, General Instructions, the TNM coder must be the physician (codes 1-4). If the TNM coder is the physician and registrar (code 6), the abstractor must document which element (T,N,M) the physician coded. If no documentation is provided, the TNM information will be disregarded and the visual editor will code extent of disease from all of the submitted documentation.

Day of Month for Four Month Rule for Coding EOD

For coding EOD when the day of the month is unknown, use information up through the last day of the fourth month, or until the completion of first course of treatment.

Example: Date of Diagnosis is 02/99/1999. Use information through 06/30/1999, or through first course of treatment.

CCR Statement Concerning Use of Colonoscopy Measurements for Assigning Colon Subsite Code

Source: DSQC #2000-04 Policy: Use of Colonoscopy Measurements, 03/08/00

There are numerous references and training guides available that provide approximate measurements of the segments of the large colon. These measurements can vary several centimeters per segment. If there is no other information given regarding subsite except for the measurement given in the colonoscopy, the measurement may be used to assign subsite. If the colonoscopy measurement is used to assign a specific subsite, the CCR's standard reference is the colon diagram in the *AJCC Cancer Staging Manual, 5th Edition*.

If there is conflicting information in the medical record with regard to subsite and there is no surgical resection, code the subsite as stated by the physician. If there is a surgical resection, code the subsite as stated in the operative report, or a combination of the operative report and pathology report.

With regard to visual editing, if a case is coded to subsite .9 by the abstractor, the visual editor may change the code to a more specific subsite based on the CCR's standard reference, but this will not be counted as a visual editing discrepancy. Conversely, if the abstractor uses the colonoscopy information to assign a more specific subsite to a .9, this will not be counted as a discrepancy.

From *AJCC Cancer Staging Manual, 5th Edition*, page 85.

The rectosigmoid of of anatomic and surgical importance because of the blood supply and the disappearance of the mesosigmoid. While the rectosigmoid is truly a junction, some authors include 1 inch of the sigmoid above and 1 inch of rectum below and refer to it as the rectosigmoid region.

These measurements are APPROXIMATIONS ONLY. Each person is different and these measurements should be used as GUIDELINES ONLY.

FIG. 12-1. The anatomic areas of the colon and rectum are: cecum (1); ascending colon (2); hepatic flexure (3); transverse colon (4); splenic flexure (5); descending colon (6); sigmoid (7); rectosigmoid (7.5); rectum (8); anal canal (9).

Breslow Thickness and Clark Level of Invasion

Source: DSQC #2000-05 Clarification: Breslow Thickness and Clark Level of Invasion, 03/08/00

Question: If only the thickness is given in the final diagnosis, can this be used to determine EOD extension along with the microscopic description?

Example: Can depth of invasion 1.7 mm (ulcerated) be converted to Clark's Level IV which equals extension 31?

Answer: No, depth of invasion cannot be converted to a "Clark" level and then to an EOD extension code. The correct answer for this question is TS 170 and EOD extension 41, involvement of the skin/dermis, NOS with ulceration. A researcher analyzing melanomas could include this case if studying "Breslow" measurements but not include it if studying "Clark" levels.

Per April Fritz and Carol Johnson, SEER, "Breslow" thickness and "Clark" level of invasion are completely separate measurements. There is not an exact correlation between the measured depth of the tumor and the invasion of the individual layers of the skin because measurements (depth) of the layers of skin vary from person to person and anatomic site to anatomic site. All you know about the case is that the melanoma measured 1.7 mm and was ulcerated. In a heavily calloused area, 1.7 mm could be above the papillary-reticular dermal interface or into the reticular dermis--you just don't know.

AJCC states to assign a T3 if a Breslow's thickness between 1.5 and 4 mm deep can be proven or Clark's level I, invasion of the reticular dermis, can be proven. It does not state that tumor between 1.5 and 4 mm is equivalent to Clark's level IV.

Focus, Focal and Foci

Source: DSQC #2000-06 Clarification: Focus, Focal and Foci, 03/08/00

Question: Does the term focal mean the same thing as focus and foci when coding tumor size?

Answer: No. Focus and foci are microscopic descriptions and are coded 001 when no other information is available. Focal refers to an area of involvement, focal should be coded 999.

The SEER Inquiry System Question and Answer #75 (4/94) states focus, focal and foci are variations of the same word. At the 5/99 SEER Coder and Abstractor Workshop, an answer was given which stated that focal does not equal focus and foci. Focal refers to an area of involvement. According to Carol Johnson, SEER, the 5/99 workshop response takes precedence over the SINC question. It is a newer interpretation based on actual usage of the words in pathology reports.

Below are some examples of diagnoses from pathology reports followed by the correct tumor size.

- 1) focal adenocarcinoma - TS 999
- 2) microfocus of adenocarcinoma - TS 001
- 3) multiple foci of adenocarcinoma in specimen - TS 001
- 4) multifocal adenocarcinoma in specimen - TS 999
- 5) microscopic focus of adenocarcinoma in multiple fragments - TS 001
- 6) focal adenocarcinoma in chips - TS 999
- 7) focal adenocarcinoma in 5% of specimen - TS 999

Rescind Guidelines for Coding Prostate Clinical EOD

Source: DSQC #2000-07 Policy: Rescind Guidelines for Coding Prostate Clinical EOD, 03/08/00

As you are aware, the Data Standards and Quality Control Unit has performed two separate recoding audits on cancer of the prostate during the past year. The results of these audits showed that the use of Guidelines for Coding Prostate Clinical EOD, dated August 10, 1998, had resulted in cases being coded unknown (Code 90) when there was sufficient information on the abstract to assign a more specific code. In addition, it was apparent that not all registrars and regions were using this guideline. We have decided to rescind the use of Guidelines for Coding Prostate Clinical EOD. Please use the instructions in the SEER Extent of Disease Manual for assigning and visual editing codes. This change will be effective with cases diagnosed January 1, 2000.

Clarification on Type of First Recurrence and Other Type First Recurrence

Source: DSQC #2000-08 Clarification: Clarification on Type of Recurrence, 05/05/00

The California Cancer Registry received the attached memo to Software Vendors and State Cancer Registries dated, March 6, 2000, from the Commission on Cancer. It was also sent to hospital cancer registrars in January. This clarification refers to data items **1880 Type of First Recurrence** and **1890 Other Type First Recurrence** with regard to California Cancer Registry reporting requirements. Although the Commission recommends that software be changed to enable cancer registrars to use these two fields to report invasive cases initially diagnosed as in situ, the California Cancer Registry follows SEER reporting requirements for multiple primaries; therefore, these codes cannot be used to meet this requirement.

Also, while it was the Commission's intention to take the responsibility for abstracting these cases away from hospital cancer registrars, the mechanism recommended would place the responsibility of abstracting the invasive case on the regional registries. In order to do this, the regional registry would have to contact the hospital cancer registrar for the medical record information. The hospital cancer registrar would still be involved with reporting these cases.

Because the addition of these codes will not result in less work for either hospital or regional cancer registries, we require that hospital cancer registrars continue to follow the CCR/SEER reporting requirements by abstracting both the in situ and invasive cancer case.

Clarification on Coding Non-Hodgkin's Lymphoma Histology

Source: DSQC #2000-09 Clarification: Clarification on Coding Non-Hodgkin's Lymphoma Histology, 10/31/00

The CCR has received a clarification from SEER regarding coding histology for Non-Hodgkin's Lymphoma. According to SEER, "Cases should be coded to the most current classification, either the Revised European-American Classification of Lymphoid Neoplasms (REAL) or the WHO, which is based on the REAL. The REAL, or WHO, classifies lymphomas according to the cell line (T or B or NK) from which the lymphoma arose. This reflects contemporary thinking in lymphomas." Therefore, the REAL, or WHO, classification has priority when coding Non-Hodgkin's Lymphoma. Ignore the SEER rule of coding to the highest morphology code number.

A document containing the REAL Classification of Lymphomas was distributed by the CCR in May 1998. Please refer to this document for the appropriate codes. If you do not have a copy of this document, contact your regional registry.

This change is effective October 31, 2000. It is not necessary to go back and recode cases that have already been abstracted or transmitted.

The CCR also wants to clarify how to code the term *malignant lymphoma, follicular center cell*. Code to 9690 - Follicular Lymphoma.

Errata and Corrections to the Third Edition of Extent of Disease 1988

Source: DSQC #2000-10 Clarification: Errata and Corrections to the Third Edition of EOD 1988, 10/31/00

The California Cancer Registry received "Errata and Corrections to the Third Edition of Extent of Disease 1988" at the SEER Abstractors and Coders Workshop in Albuquerque, New Mexico in May 2000. Since its distribution at this meeting, it has been updated (July 1, 2000).

Many of the changes in this errata are editorial corrections to the Extent of Disease manual. There are some changes, however, that will require review and recoding. These are noted in bold in the "Change/addition" column. There are also changes that were not bolded for review in the errata, but need to be reviewed and recoded. These are Soft palate, p. 2 - delete code 50, add code 65 for "Hard palate" and Liver, p. 3 - delete code 75, add code 62 for "Gallbladder."

The CCR is in agreement with SEER and requires that all of the changes in this errata take place immediately and are retroactive to cases diagnosed January 1, 1998 and later.

Tumor Size for Combined *In Situ*-Invasive Tumor

Source: DSQC #2000-11 Clarification: Tumor Size for Combined In Situ-Invasive Tumor, 12/18/00

The CCR has received clarification from SEER regarding coding tumor size for *in situ*-invasive tumors when the *in situ* component is described as a minor component.

When a pathology report describes tumor size as invasive with a minor component of *in situ*, then code the total tumor size. Minor component is defined as: less than 5%, foci of tumor, or stated as "minor component."

Data Changes for 2001

Source: DSQC #2000-12 Guideline: Data Changes for 2001, 12/18/00

As you are aware there are a couple of significant changes that are effective with cases diagnosed January 1, 2001. The first of these changes is the implementation of the third edition of the *International Classification of Diseases for Oncology (ICD-O-3)* and the other is the change in reporting legislation that requires the reporting of benign and uncertain behavior intracranial and central nervous system (CNS) tumors. The following will assist you in coding and collecting these cases.

Intracranial and CNS Tumors

Benign and uncertain behavior intracranial and CNS tumors are required effective with January 1, 2001 cases, as noted above. Since you will need to begin casefinding in January, two lists are attached to assist you. The first list includes intracranial and CNS histologies that are now reportable. The second list includes ICD-9-CM codes to assist you in casefinding in medical records. These tumors are to be sequenced following the American College of Surgeons' Commission on Cancer guideline for tumor sequencing, *i.e.*, alpha characters - AA for the first tumor, BB for the second, etc. With regard to staging these tumors, the CCR is not requiring that they be staged at this time. We recommend that you code EOD Extension 99 (Unknown) for these cases. If your registry uses SEER Summary Stage, we recommend that you code them to Code 9. There may be registries that have been collecting benign brain tumors prior to this change in legislation. If you have been assigning codes/stages to them in the past, we recommend that you continue this practice. The CCR requires that follow up be performed on these cases in hospitals that routinely perform follow up to meet Commission on Cancer requirements.

ICD-O-3

The histology for cases diagnosed January 1, 2001 is to be coded using ICD-O-3. The histology for cases diagnosed prior to this date is to be coded using ICD-O-2. There will be separate fields available in CNEXT for coding these histologies. There are histologies that changed from malignant to borderline and vice versa in ICD-O-3. One of these is juvenile astrocytoma - Code 9421 (see DSQC Memo #2001-04). ~~The NAACCR Uniform Data Standards Committee voted to continue to collect these tumors. The CCR will also require that these continue to be collected; however, behavior should be coded /1 (uncertain behavior) instead of /3 (malignant). The reason for collecting these as /1 is because of the new legislation requiring the collection of benign and uncertain behavior intracranial tumors. It was felt that it would be less confusing to collect these under the correct behavior code.~~ Cases diagnosed prior to January 1, 2001 should continue to be coded /3.

Borderline ovarian tumors changed from malignant to borderline in ICD-O-3. The California Cancer Registry will require the continued collection of borderline ovarian tumors due to their potential to become malignant and because there are a number of studies underway in the state that include these tumors. They are also to be sequenced following American College of Surgeons guidelines for benign tumors. Behavior should be coded to /1 (borderline behavior). Although the behavior of these tumors has changed, follow up should be performed on these patients.

NAACCR formed an ICD-O-3 Working Group to address many of the questions that have been asked by both cancer registrars and cancer registry software vendors. A document entitled, *Guidelines for ICD-O-3 Implementation* was prepared to answer these questions. It was agreed that this document would be distributed widely by NAACCR, SEER and the American College of Surgeons' Commission on Cancer so you should be receiving it soon. It will also be available on the Web Sites of these organizations (SEER - <http://www.seer.cancer.gov>; NAACCR - <http://www.naacr.org>; COC - <http://www.facs.org>). If you have not received a copy of this document, we would recommend that you download it and review it carefully. It contains an appendix with the list of histology changes in ICD-O-3 that can be used in conjunction with your ICD-O-2 manual until you are able to obtain an ICD-O-3 manual.

As many of you are aware, SEER has developed a training module on ICD-O-3 that is on its Web Site. In addition, a videoconference is planned for January 9, 2001. Your regional registries will be providing you with information as to sites for the videoconference. The CCR, in addition, will be developing a document

that will include all of the available sites in the state for those of you who may not be able to get to the videoconference in your region. As with the Surgery Codes videoconference, the CCR will be making copies of the videoconference to be provided to your regional registries for those of you who will be unable to participate that day. We recommend your participation in both of these activities.

We will continue to provide you additional information regarding ICD-O-3 and benign and uncertain behavior brain tumors through your regional registries.

Race and Ethnicity Code Documentation

Source: DSQC #2001-02 Guideline: Race and Ethnicity Documentation, 05/04/01

All race codes must be supported by text documentation. This information must be documented in the Remarks or Physical Examination field, with the exception of race code 88 (no further race documented). Documentation should include each race and ethnicity specified and the source of this information. Search beyond the face sheet for a more specific race and/or ethnicity.

Examples of statements in the Remarks or Physical Examination field are as follows:

Pt is Filipino per the H&P.

Pt is Hispanic, NOS, per consult.

Pt is Cuban per physician notes.

Race is White per face sheet.

No race information available in chart.

Anal Intraepithelial Neoplasia, Grade III

Source: DSQC #2001-03 Clarification: AIN Grade III, 05/04/01

The CCR has received clarification from SEER regarding the reportability of Anal Intraepithelial Neoplasia (AIN), Grade III. In ICD-O-3, anal intraepithelial neoplasia, grade III, (C.21.1) is coded to 8077/2 and is reportable to the CCR beginning with cases diagnosed January 1, 2001 forward. Cases diagnosed AIN, Grade II-III, are also reportable beginning with cases diagnosed January 1, 2001 forward.

Change in Reporting Pilocytic/Juvenile Astrocytoma

Source: DSQC #2001-04 Clarification/Change: Pilocytic/Juvenile Astrocytoma, 05/04/01

Pilocytic/juvenile astrocytoma – morphology code 9421 must be reported to the CCR with a behavior code of /3. This is a change from the instructions in the Data Changes 2001 (DQSC #2000-12) statewide memorandum dated December 18, 2000, that stated to code these to a behavior of /1. This will allow the CCR to be compatible with SEER reporting requirements. These tumors will be sequenced as any other reportable malignancy, using digits, not alpha characters. This will continue to allow sequence numbers to reflect the chronological order of reportable malignancies.

Revised Guideline: Race and Ethnicity Code Documentation

Source: DSQC #2001-05 Rescind Guideline: Race & Ethnicity/pending, 08/13/01

Effective September 18, 2001, the attached race and ethnicity code documentation guideline (DSQC Memo #2001-02) has been revised to remove the requirement to document the source of race and ethnicity information. All race codes must be supported by text documentation to include each race and ethnicity specified. This information must be documented in the Remarks or Physical Examination field, with the exception of race code 88 (no further race documented). With 2002 data changes, a race and ethnicity text field will be added to the data set for documenting this information.

ICD-O-2 to ICD-O-3 Conversion

Source: DSQC #2001-06 Guideline: ICD-O-2 to ICD-O-3 Conversion, 08/17/01

With the transition from ICD-O-2 to ICD-O-3, a conversion program was developed by the SEER Program to be used by software vendors in cancer registries where it was elected to convert historical ICD-O-2 data to ICD-O-3 data. Please consult your software vendor instructions for this histology conversion review.

Although there are a large number of histologies flagged for review, the California Cancer Registry is only requiring hospital and regional registries to review the following:

<u>ICD-O-2 Code</u>	<u>ICD-O-2 Histology</u>
8580/3	Thymoma, malignant
8803/3	Small cell sarcoma
9731/3	Plasmacytoma, NOS

SEER Coders and Abstractors Workshop Documents

Source: DSQC #2001-07 Guideline: SEER Documents, 11/12/01

Three documents were distributed at the SEER Coders and Abstractors Workshop in May 2001:

- *Clarifications for Abstracting and Coding Hematopoietic Diseases* (see PDF document)
- *ICD-O-3 Errata and Clarifications* (see PDF document)
- **[Coding and Abstracting Guide to the Hematopoietic Diseases](#)**

This item is obsolete and has been replaced with the SEER book, *Abstracting and Coding Guide for the Hematopoietic Diseases* (May 2002) [No. T-007] Pub. No. 02-5146. To order go to the [SEER website](#).

Although *Coding and Abstracting Guide to the Hematopoietic Diseases* is a draft, please use it until a final version is available.

Please refer to these documents for assistance when abstracting these cancer sites. They are to be used for cases diagnosed January 1, 2001 and later.

For your convenience, this memorandum can be filed under Appendix S in the 6th Edition of Volume I.

A fourth document, *Clarification of Coding Rules for Prostate Cancer*, was distributed but is currently under review at the CCR. This will be distributed in the future.

[Note: the CNExT Labels files have been updated to reflect the *ICD-O-3 Errata and Clarifications* document.]

Reportable In Situ Terms

Source: DSQC #2002-01: Clarification: Reportable In Situ Terms, 1/28/02

The following is a revision of the list of reportable terms indicating in situ behavior (Volume I, Section V.3.4.2 In Situ Coding). Please note the addition of the terms AIN III, DIN 3 and LIN to this list for cases diagnosed 1/1/2001 forward. For AIN, DIN, LIN, VAIN and VIN, grade II-III is reportable. Reportable terms indicating in situ behavior include:

- AIN III (anal intraepithelial neoplasia, Grade II-III or III)**
- Bowen's Disease
- DCIS (ductal carcinoma in situ)
- DIN 3 (ductal intraepithelial neoplasia 3)**
- Clark's level 1 for melanoma (limited to epithelium)
- Confined to epithelium
- Hutchinson's melanotic freckle
- Intracystic, non-infiltrating
- Intraductal
- Intraepidermal
- Intraepithelial
- Intrasquamous
- Involvement up to but not including the basement membrane
- LCIS (lobular carcinoma in situ)
- Lentigo maligna
- LIN (laryngeal intraepithelial neoplasia)**
- Lobular neoplasia, Grade III
- No stromal invasion
- Non-infiltrating
- Non-invasive
- Precancerous melanosis
- Preinvasive
- Queyrat's erythroplasia
- Stage 0
- VAIN III (vaginal intraepithelial neoplasia, Grade II-III or III)*
- VIN III (vulvar intraepithelial neoplasia, Grade II-III or III)*

* Effective with cases diagnosed 1/1/1992 and later

** Effective with cases diagnosed 1/1/2001 and later

All other terms have been reportable since the region's reference date.

As a reminder, carcinoma in situ (including squamous cell and adenocarcinoma) of the cervix and Cervical Intraepithelial Neoplasia, CIN III, are not reportable effective with cases diagnosed January 1, 1996 and later. Prostatic Intraepithelial Neoplasia (PIN III), morphology code 8148/2 is also not reportable to the CCR.

Surgical Margin Clarifications for Melanoma: Surgery Codes 40 and 50

Source: DSQC #2002-02: Clarification: Melanoma Surgery Codes, 1/28/02

Clarification of surgery codes 40 and 50 for surgical margins of melanoma has recently been provided by the Commission on Cancer. Please make the following changes as noted:

Code 40	Wide excision or re-excision of lesion or minor (local) amputation, NOS. Margins of excision are 1 cm or less. Margins may be microscopically involved. Local amputation is the surgical resection of digits, ear, eyelid, lip or nose.
Code 50	Radical excision of a lesion, 1 cm or more, NOS Margins of excision are greater than 1 cm and grossly tumor free. The margins may be microscopically involved.

SEER Prostate Guidelines

DSQC #2002-03 GUIDELINE: SEER Prostate Guidelines
EFFECTIVE: Cases Diagnosed on or after 1/1/2001

The SEER Prostate Guidelines (see PDF document) are effective with cases diagnosed 1/1/01 and forward. Upon review of these guidelines, the CCR feels there are no major changes to the manner in which we have been coding extension for prostate cases. However, the CCR asks that you review all prostate cases diagnosed 1/1/01 forward for consistency in following these guidelines.

- Note on Page 4 - with SEER's permission, a CCR note has been added to clarify when to use PSA coding guidelines.
- Regarding date of diagnosis, please follow the rules in Volume I, III.3.3.
- Regarding Example 4 on page 2, April Fritz provides this clarification,

"For Example 4 on page 2, the pathologic code should be 20. We recognize that the first sentence under the PATHOLOGIC EOD section could be phrased more clearly (and it will be in the next iteration). The intent of the statement is to allow histologic information from clinical staging (i.e. needle biopsy or TURP tissue) to supplement information from the prostatectomy. The statement is a variation of Note 3, page 138 of the SEER EOD manual, 3rd edition. The guidelines are intended to supplement the notes in the EOD book, not contradict them."

As a reminder, clinical information that is disproven by the pathology of the prostatectomy specimen should NOT be used. April adds,

"In Example 3, the clinically identified hard nodule turned out to be an adenoma in the right apex. The remainder of the prostatectomy specimen reported only tumor involving the left lobe and was silent on anything else in the prostate, including the left apex. Had there been a bilateral positive biopsy of the apex or a needle biopsy of the left apex, we agree that the appropriate code should be 34. But without it, the best pathologic extension code to use is 20, involvement of one lobe."

EOD Lymph Node Summary Field: 0 vs 9 Guideline

DSQC #2002-04 Guideline Revision: EOD Lymph Node Summary Field: 0 vs 9 Guideline, 6/27/02
EFFECTIVE: Cases Diagnosed 1/1/2002 Forward

Attached please find the revised version (see PDF document) of the EOD Lymph Node Summary Field, 0 vs. 9 Guideline (original statewide distribution date of July 10, 1999). This version replaces the original document. The changes to the document are italicized for your convenience.

Along with providing more clarification, this revision contains:

- SEER Guidelines for lymph node involvement specific to prostate primaries
- Changes - Use code 0 for lymph nodes not mentioned at time of surgery or if radiologic studies are performed and lymph nodes are not mentioned
- Deletion - Use code 9 when there is lymphadenopathy mentioned on radiology studies and no clear documentation which indicates involvement by cancer

Revision of Extension Fields for Breast Cancer

Source: DSQC #2002-05: Guideline: Revision of Extension Fields for Breast Cancer, 3/12/2002
EFFECTIVE: June 12, 2002

The attached SEER document, Appendix 1, Revised Breast Cancer EOD Codes (Effective for cases diagnosed January 1, 1998 through December 31, 2002) is provided to supplement CNExT Version 1.2.3.

Due to the delay in implementing Collaborative Stage until 2004, these codes will be effective through December 31, 2003 diagnosis year. This effects extension code fields 10–30 and is meant to reduce the number of cases that are unstageable in the TNM conversion algorithm by capturing pathological information regarding both the in situ and invasive components of the tumor.

- The Regions have been instructed by the CCR to recode cases already submitted by the facilities.
- The online EOD manual has been updated for easy reference. This Appendix expands codes 10-30 and replaces all breast extension codes in the SEER EOD manual.
- The effective dates on Appendix 1 have been modified to read January 1, 1998 through December 31, 2003.

Reminder: Pathology text information must support SEER EOD codes.

Revision of Extension Fields for Breast Cancer

The SEER Program will expand the choices of EOD Extension codes for breast cancer to document whether the tumor size recorded is other than for purely invasive cancers.

Purpose: To reduce the number of cases that are unstageable in the TNM conversion algorithm.

Background: In the 1999 breast cancer data, it became apparent that more and more path reports were only recording the size of the entire lesion and not the invasive component (resulting in 999 codes for breast tumor size). This has led to many breast cancer cases being staged as unknown instead of stage I or II. The graph (Appendix 2) shows that the rate of unknown breast cancer has nearly doubled between 1998 and 1999 for women 50-64 and stage I has dropped dramatically. This shift is highly likely to be due to the tumor size rule rather than an actual shift in stage.

Cases affected: All breast cancer cases with Tumor Size code 999 and Extension code 10, 20 or 30.

Diagnosis date: *Current SEER registries:* diagnosed between January 1, 1998 and December 31, 2003

Expansion SEER Registries: diagnosed between January 1, 2000 and December 31, 2003.

Procedure: Select all breast cancer cases (non-lymphomas) with '10,' '20,' or '30' in the EOD extension and '999' for tumor size diagnosed after January 1, 1998. For each case, review the case and code size and EOD extension according to the attached documentation (Appendix 1). Changes should be recorded in the file that is submitted to NCI-SEER.

Completion date: Review of cases diagnosed January 1, 1998 through December 31, 2000 must be completed by and included with the Feb 1, 2003 submission. If possible, the cases diagnosed in 2001 should also be reviewed by February 1, 2003, but if this is a problem for 2001 cases, they may be submitted in the August 2003 submission.

SEER Edits: To accommodate the new codes, SEER*Edits will be revised and the changes will be distributed to participating regions as soon as possible.

Note 1: Several registries have asked whether they should also review cases with tumor size codes 009 and 019. The answer is that NCI-SEER is not requiring review of those cases. If an individual registry chooses to review them, they can. The purpose of this review is to derive a tumor size that allows as many cases as possible to be converted to a TNM stage group. Codes 009 and 019 already indicate that the tumor, whether purely invasive or mixed invasive and in situ, is less than 2 cm, and therefore a TNM Tumor category of T1 can be inferred. Summary staging is not affected.

Note 2: A number of people asked about requiring software vendors to make changes in hospital registry software. The consensus is that, assuming that SEER changes over to the Collaborative Staging System with cases diagnosed January 1, 2003 and after, the ability to collect tumor size information will be captured in a different

way. It is not feasible to require hospital software vendors to make the changes for the remainder of 2002 cases and then change again for 2003.

Race/Ethnicity Code Documentation

DSQC #2002-06 GUIDELINE REVISION: Race/Ethnicity Code Documentation
 (Replaces DSQC #2001-02 & 2001-05)
 EFFECTIVE: July 23, 2002

Race and ethnicity are two very important data items to epidemiologists who investigate cancer. The National Cancer Institute has recognized the need to better explain the cancer burden in racial/ethnic minorities and is concerned with research on the full diversity of the U.S. population. The CCR recognizes the importance of these data items and relies on quality data to assist researchers in identifying and reducing disparities due to race and ethnicity.

1. Race code documentation must be supported by text documentation for those cases where there is conflicting information. Outlined below are examples of when text documentation would be required.

NOTE: These examples are not intended to demonstrate all possible scenarios.

Scenarios Demonstrating Conflicting Race Information:

<p>A. Name: June Hashimoto Race: White Birthplace: Unknown Marital: Single Status:</p>	<p>E. Name: Maria Tran Race: White Birthplace: Spain Marital: Separated Status:</p>
<p>B. Name: Bob Nguyen Race: White Birthplace: Mexico</p>	<p>F. Name: Carlos Johnson Race: Black Ethnicity: Hispanic Marital: California Status:</p>
<p>C. Name: Robert Jackson Race: Mexican Birthplace: California</p>	<p>G. Name: Arlene Thompson Race: Filipino Birthplace: California Marital: Divorced Status:</p>
<p>D. Name: Moon Smith Race: Japanese Birthplace: California Marital: Married Status:</p>	

2. A text statement indicating patient’s race, i.e., “Pt is Japanese”, is required for conflicting types of cases (see #1). This information must be entered in either the physical exam or remarks text fields.
3. Cases with conflicting information that lack supporting text documentation will be returned as queries and counted as discrepancies.
4. While race code documentation is only required when there is conflicting information, CCR recognizes the importance of race code documentation and strongly recommends that registrars continue to document race in the physical exam or remarks fields. Remember to search beyond the facesheet for the most definitive race and/or ethnicity information.
5. In version 1.2.3 of CNExT, the Remarks screen is now accessible near the demographic information in addition to where it was originally located for registrar’s convenience in documenting race information.

SEER Coders & Abstractors Workshop Documents (May 2002)

DSQC #2002-07 GUIDELINE: SEER Coders & Abstractors Workshop Documents (May 2002), 8/1/02

The three attached documents were distributed at the SEER Abstractors & Coders Workshop in May 2002.

1. *Changes to SEER Data Set* (effective for cases diagnosed **1/1/03** & forward) (see PDF document)
2. *FDA Oncology Agents Not Listed in SEER Book 8* (effective for cases diagnosed **1/1/02** and forward) (see PDF document)
3. *Determining the Number of Primaries* (effective for cases diagnosed **1/1/02** and forward)

Please refer to these documents for assistance when abstracting. For your convenience, this memorandum can be filed under Appendix S in the 6th edition of Volume One.

The following documents were distributed at the workshop in May, however, they are currently being updated and/or under review by CCR. These documents will be distributed at a later date:

1. *SEER Summary Staging Manual Errata* -- An updated list is currently being developed and will be available in about 1 month. CCR will wait for the updated version for distribution.
2. *Coding Complex Morphologic Diagnoses* -- SEER is amending this information. CCR will distribute the revised version once it is available.
3. *Field & Code Changes* - DSQC staff will be meeting and discussing whether we need to retain any of these fields.
4. *NAACCR Standards* -- The table is being revised. CCR will wait for the revised document for distribution.

Determining the Number of Primaries

Trying to decide whether lesions are reportable as single or multiple primaries can be confusing. First, let's review the definition of separate sites.

1. For certain sites, a difference in the subsite indicates a separate primary. These sites are colon (C18), anus and anal canal (C21), bone (C40-C41), melanoma of skin (C44), nerves (C47), and connective tissue (C49).

For practical purposes, the only two sites where you are likely to encounter multiple primaries are colon and melanoma of the skin.

For example, a melanoma of the skin of the arm (C44.6) and a melanoma of the skin of the leg (C44.7) are reported as two primaries.

2. For other sites, a difference in the main category (the two numbers after the C) of the site code is reported as a separate primary.

For example, stomach (C16) and cecum (C18.0) are separate primaries and two abstracts would be prepared.

Prepare a single abstract when there is a difference in subsite.

For example, two separate squamous carcinomas, one of the true vocal cord (C32.0) and one of the posterior surface of the epiglottis (C32.1) are reported as a single primary because there is a difference only in subsite.

3. Table 24 in ICD-O-3 and pages 9-10 in the SEER Program Code Manual list site code groupings that are considered one primary site for reporting purposes. The groups that you are most likely to use are head and neck, genitalia and urinary system.

Examples:

A lesion on the soft palate (C05.1) and a lesion on the buccal mucosa (C06.0) would be reported as a single primary.

Squamous carcinoma of the vulva (C51) and squamous carcinoma of the vagina (C52) would be reported as a single primary.

Transitional cell carcinoma of the renal pelvis (C65) and a separate transitional cell carcinoma of the ureter (C66) would be reported as a single primary.

4. When there are multiple lesions, a difference in the first three digits of the histology code usually means different histologies.

This means a difference in any of the first three digits of the histology code.

An angiosarcoma (9120) and an angiofibrosarcoma (8894) are different at the first digit. These are separate histologies.

A mucinous adenocarcinoma (8480) and a ductal carcinoma (8500) are different at the second digit. These are separate histologies.

An alveolar adenocarcinoma (8251) and a papillary adenocarcinoma (8260) are different at the third digit. These are separate histologies.

Oat cell carcinoma (8042) and small cell carcinoma (8041), because they are only different at the fourth digit, are the same histology for the purpose of determining the number of primaries to report.

Prepare a Single Abstract for:

1. A single lesion with one histologic type.
2. A single lesion with multiple histologic types. Code the histology in priority order: 1) a combination code if one exists; 2) a more specific code; 3) majority of the tumor; 4) higher ICD-O-3 code.

Examples:

A breast tumor with a mucinous component (8480/3) and a ductal component (8500/3) is reported as a single primary. (Code the combination histology, 8523/3.)

A colon cancer biopsy reported as adenocarcinoma, NOS (8140/3) and described as mucinous adenocarcinoma (8480/3) when resected. (Code the more specific diagnosis, 8480/3.)

A stomach carcinoma, predominantly signet ring type. (Code the majority term, 8490/3.)

A bladder tumor with transitional cell CA (8120/3) and squamous cell carcinoma (8070/3) is a single primary. (No combination code; code to higher ICD-O-3 code, 8120/3.)

3. Multiple lesions of the same histologic type, if diagnosed in the same site within two months.

For example, oat cell carcinoma (8042/3) of the LUL of the lung (C34.1) and small cell carcinoma (8041/3) of the LLL of the lung (C34.3) are a single primary.

4. An adenocarcinoma NOS and a more specific type of adenocarcinoma in the same site within two months are a single primary. This occurs most often in the colon.

For example, two separate tumors in the ascending colon, an adenocarcinoma (8140/3) and a mucin-producing adenocarcinoma (8481/3), are a single primary.

5. Multiple tumors of different cell types that commonly appear together in the same primary site diagnosed within two months are reported as a single primary.

Examples:

Ductal carcinoma in the UOQ and a lobular carcinoma in the LIQ are reported as a single primary (C50.9 -- 8522/3).

Separate nodules of follicular carcinoma and papillary carcinoma in the thyroid. (Use the combination code 8340/3)

Coding Complex Morphologic Diagnoses

Source: DSQC #2002-08 Guideline: Coding Complex Morphologic Diagnoses (revised 8/02)
EFFECTIVE: For cases diagnosed January 1, 2001 & forward

Per DSQC Memorandum 2006-01:

Effective immediately, DSQC Memorandum 2002-08 "Coding Complex Morphologic Diagnoses," is rescinded and the rules contained in the document **should no longer be applied.**

Histology Code for Mucinous Adenocarcinoma in a Villoglandular Polyp

Source: DSQC #2003-01 Revised Clarification: Histology Code for Mucinous Adenocarcinoma in a Villoglandular Polyp
EFFECTIVE: March 31, 2003

The histology code for mucinous adenocarcinoma in a villoglandular polyp is code 8480/3.

NOTE: CCR Inquiry System #226 will be revised to reflect the correct code: 8480/3.

NOTE: CCR Inquiry System #498 is a similar question. That answer is correctly stated and remains unchanged.

Surgery of Primary Site - Breast

DSQC #2003-02 CLARIFICATION: Surgery of Primary Site - Breast
EFFECTIVE: September 1, 2003

The CCR has received a revised answer from the Commission on Cancer and SEER regarding cases treated with bilateral mastectomies with separate primaries.

If a patient is diagnosed with two separate right and left breast primaries and treated with right and left mastectomy(s), surgery code is 41 or 51 for each primary; two separate abstracts are reported, see examples below.

Codes 42/52 are used to capture prophylactic mastectomy of the opposite non-cancerous breast.

This is documented in Volume One, Seventh Edition, Appendix Q, SEER Program Code Manual, 3rd Edition, Revision 1, Appendix F, pages 23 and 24, and the FORDS manual, pages 269 and 270.

NOTE: CCR Inquiry System #447 will be revised to reflect the correct code: 41/51

NOTE: SINQ 20012002 reflects the correct code: 41/51

Example 1

Rt. & Lt. Breast CA (2 separate primaries)
Right Simple Mastectomy: Surgery Code
Left Simple Mastectomy: Surgery Code
Rt. Surgery Code = 41
Lt. Surgery Code = 41

Example 2

Rt. & Lt. Breast CA (2 separate primaries)
Right Modified Mastectomy
Left Modified Mastectomy
Rt. Surgery Code: 51
Lt. Surgery Code: 51

Example 3

Left Breast CA
Left Simple Mastectomy
Right Simple Mastectomy (Prophylactic)
Surgery Code =42

Example 4

Right Breast CA
Right Modified Mastectomy
Left Modified Mastectomy (Prophylactic)
Surgery Code =52

Multiple Primaries - Breast

DSQC #2003-03 CLARIFICATION: Multiple Primaries - Breast
EFFECTIVE: December 8, 2003

The CCR has received the following clarification from SEER regarding the use of the combination code for breast primaries.

When abstracting and coding breast cancer, determine if there is one tumor with complex morphologies or separate tumors with different histologies. Use the following guideline to determine number of abstracts:

- One tumor with complex morphologies; prepare one abstract
- Separate tumors with different histologies; prepare one abstract for each tumor

The use of combination codes for breast primaries with separate tumors in different locations are limited to the following scenarios and coded as one primary:

- ductal and lobular ca (8522)
- Paget's Disease and intraductal ca (8543)
- Paget's Disease and infiltrating ductal ca (8541)

Other histologic type differences that occur as separate tumors in different parts of the same breast are coded as multiple primaries. ICD-O-3 histology code 8523 is NOT to be used to combine histologies from separate primaries; it is used for mixed histologies in a single primary.

CCR Inquiry System ID #540, 604 and 640 will be revised to reflect this clarification.

After the implementation date of this memo (30 days after effective date), breast cases incorrectly submitted as one primary will not be processed by the regions. These cases will be returned and need to be resubmitted as two primaries.

ACoS Data Items

DSQC #2003-04 CLARIFICATION: ACoS Data Items
EFFECTIVE: Cases Diagnosed January 1, 2003 Forward

We have received numerous questions regarding surgery and treatment code fields, thus we have compiled a list of clarifications from the American College of Surgeons' Commission on Cancer (CoC) FORDS Manual as well as the CoC Inquiry and Response System. They are as follows:

Diagnostic and Staging Procedure Codes

This field describes incisional, needle or aspiration biopsies of the primary site or regional/distant tissue only. It *does not* describe incisional, needle or aspiration biopsies of regional lymph nodes; these are described in the "Scope of Regional Lymph Node Surgery".

Incisional biopsies and fine needle aspirations of the primary site performed for purposes of staging or diagnosing a cancer are coded as Surgical Diagnostic and Staging Procedures **02** when the procedure does not involve surgical treatment.

References: FORDS pages 16 and 109-110, ACoS I&R # 8996

Surgery Code: Bladder

Use code **27** for a transurethral resection bladder (TURB)

References: ACoS I&R #9486

Surgical Procedure/Other Site:

For the field Surgical Procedure/Other Site, apply code **1** - Nonprimary surgical procedure performed, if surgical treatment was performed for the following primary sites and morphologies:

- Unknown Primaries
- Ill-Defined Primaries
- Hematopoietic/Endoreticulothelial/Immunoproliferative or Myeloproliferative disease morphologies,

SEER Coders & Abstractors Workshop Documents (May 2003)

DSQC #2003-05

GUIDELINES: SEER Workshop Documents (May 2003)

EFFECTIVE: See below

The attached documents were distributed at the SEER Abstractors & Coders Workshop in May 2003.

1. *The Brain Book, Abstracting & Coding Guidelines for Primary Central Nervous System Tumors; Draft #2(9/4/2003)*. Effective for cases diagnosed 1/1/04 and forward.
2. *ICD-0-3 Errata and Clarifications Set #2*
3. Replacement page for *SEER Program Manual*, page 133 (Reason No Cancer Directed Surgery)
4. Replacement pages for *SEER Program Manual*, Appendix F (colon, breast & prostate)

These documents will also be posted to the CCR website in pdf format. Registrars may go to the CCR website to download "The Brain Book", draft #2. If unable to access the website, please request that your region provide you with a hardcopy. April Fritz has informed us that a finalized version of "The Brain Book" will be available at some time in the future. In the meantime, the CCR wants the draft #2 version available to registrars.

2004 Data Changes Training Issues/Frequently Asked Questions

DSQC #2005-01

CLARIFICATION

EFFECTIVE: Cases Diagnosed January 1, 2004 Forward

The attached document includes clarifications in coding and abstracting instructions resulting from the 2004 Data Changes Training. Although this clarification is effective with cases diagnosed January 1, 2004 forward, it is not necessary to go back and recode cases that have already been abstracted or transmitted.

Please refer to this document for assistance when abstracting. For your convenience, this memorandum can be filed under Appendix S, in Volume 1.

Benign Brain and CNS Tumors (BBT)

1. **Question:** What diagnosis year is BBT reporting effective?

Response: Statewide reporting of BBT commenced with diagnosis year 1/01/01.

For cases diagnosed 1/01/04 forward, abstract using 2004 Data Changes rules (Vol. I, Sec. II.1.9.1 - II.1.9.7)

2. **Question:** How are BBT staged?

Response: For diagnosis years 2001-2003 the CCR does not require benign brain tumors to be staged; the default EOD codes are 999 99 9 99/99. If you have been assigning codes/stages to them in the past, we recommend you continue this practice.

For cases diagnosed 1/01/04 forward, use the Collaborative Staging scheme for the appropriate site. There is a schema for Brain and Cerebral Meninges, Other parts of the CNS (includes the spinal meninges, and cranial nerves), and Thymus, Adrenal Gland and Other Endocrine Glands (includes pituitary and pineal glands and craniopharyngeal duct).

3. **Question:** What sequence number is assigned to a second BBT?

Response: The first BBT is assigned sequence #60. If another BBT primary tumor is subsequently diagnosed, the first BBT tumor sequence is changed to #61 and the second BBT is assigned sequence #62.

Example: In 2004, a person was diagnosed with a BBT (sequence #60). In 2005, a second reportable BBT was diagnosed. The 2004 case changes to sequence #61 and the tumor diagnosed in 2005 is assigned sequence #62.

4. **Question:** If a BBT case is diagnosed prior to 01/01/04 and recurs in 2004, is the recurrence reportable?

Response: If the case was diagnosed prior to 1/01/01, it would not be reported. If the case was diagnosed 1/01/01 through 12/31/03, it would have been previously reported to the CCR using previous reporting rules.

5. **Question:** How many primaries do you abstract in the scenario below?

A patient has a known BBT diagnosed after 1/01/04 and it is not treated. After time, the patient is diagnosed with a malignant brain tumor in the same site.

Response: Report as two primaries one benign (sequence number 60) and one malignant (sequence number 00). Once a tumor transforms from benign to malignant, another abstract for the malignant tumor is prepared.

Reference: Volume I, Section II.1.9.5

6. Question: If there is one lesion in the midline of the brain, is this coded as one lesion?

Response: Yes, code as one lesion and use the code where the midline structure is listed.

Example: A midline lesion of the third ventricle would be coded to C71.5 third ventricle

7. Question: If there is one lesion in the midline of the brain and one lesion elsewhere in the brain with the same histology diagnosed at the same time, is this one primary or two?

Response: Compare the subsite code for the midline tumor to the subsite code for the other tumor. If they are different at the subsite level, abstract as two primaries. If the location of the midline tumor is in the same subsite, it would be considered one lesion.

Example: There is one tumor in the midline of the third ventricle (C71.5) and a separate tumor with the same histology within the third ventricle (C71.5). Abstract as one primary.

Example: There is one tumor in the midline of the temporal lobe (C71.2) and a separate midline tumor located in the right parietal lobe (C71.3). Abstract as two primaries.

8. Question: How do you code laterality for a lesion in the midline of the brain?

Response: Midline tumors of the CNS are sometimes coded 9 in laterality. If the lesion is midline in a single brain structure, then code 0. For example, laterality is coded 0 (not a paired organ) for C71.6, cerebellum, NOS.

9. Question: For coding a single primary brain tumor with 2 histologies, (both histologies are listed in the same histologic group, Volume I, page 31), which histology do you code?

Response: The table on page 31 of Volume I does not apply to single tumors. It only applies when there are multiple tumors. For single tumors with different histologies, follow rule 4 in Volume I, page 82, which states to use the numerically higher histology code.

10. Question: Are non-malignant blood vessel tumors occurring in the CNS sites reportable?

Response: Yes, the ICD-O-3 Primary Brain and CNS Site/Histology Listing (Appendix V in Volume I) includes blood vessel tumors under several categories including meninges C70.0-C70.9, brain C71.0-C71.4 and C71.7-C71.9, (excluding ventricle), spinal cord C72.0, cauda equina C72.1, cranial nerves C72.2-C72.5, cerebellum C71.6 and other nervous system C72.8-C72.9.

These tumors include:

- 9120/0 Hemangioma, NOS
- 9121/0 Cavernous hemangioma
- 9150/0 Hemangiopericytoma, benign
- 9150/1 Hemangiopericytoma, NOS
- 9161/1 Hemangioblastoma

11. Question: Should blood vessel tumors occurring in CNS sites be coded to blood vessels or CNS?

Response: They should be coded to the CNS site in which they occur.

Example: Patient is diagnosed with a hemangioblastoma of the right temporal lobe of the brain. Site code: C71.2 (temporal lobe, brain), histology code: 9161/1, Laterality: Right only

12. Question: Is laterality coded for tumors of the meninges?

Response: Code laterality for cerebral meninges (C70.0) only. Spinal meninges (C70.1) is not listed as a lateral site, thus laterality for spinal meninges is coded to 0.

Reference: Volume I, Section II.1.9.2

13. Question: Is it possible for a benign schwannoma to arise on the spinal cord or do they always arise from nerve roots coming off the cord?

Response: Anatomically they must be derived from Schwann cells which are not a part of the CNS, so they must all come from peripheral nerves, therefore, they all come from nerve roots. Thus, benign schwannomas of the spinal cord/peripheral nerves are not reportable.

14. Question: If the surgeon states "resection of intradural extramedullary schwannoma" does this mean that the tumor is outside the cord but within the dura?

Response: Yes, but it also means it is on a peripheral nerve root and therefore not reportable.

COLLABORATIVE STAGING

GENERAL INSTRUCTIONS

- 1. Question:** The General Instructions on page 25 of the Collaborative Staging Manual states, "Prostate needle biopsy shows 0.6 mm carcinoma, Code as 001." Page 27 states "For an incisional needle biopsy, code tumor size as 999. Do not code the tumor size from a needle biopsy unless no residual tumor is found on further resection." This is a contradiction. Which do we follow?

Response from the CoC/CS Steering Committee:

The General Instructions on page 25, which currently reads "Prostate needle biopsy shows 0.6 mm carcinoma Code as 001," will be edited and corrected to state "Prostate TURP shows 0.6 mm tumor size." The instruction on page 27 is correct.

- 2. Question:** If different metastatic sites are equally distant, how is the CS Distant Mets coded? Is this CS Mets Eval?

Response: For the CS Distant Mets field, it doesn't matter how "distant" a metastatic site is for this field. The codes for CS Distant Mets are divided into the following categories:

Code 10 - Distant lymph nodes (site specific)
Code 40 - Distant metastasis (except code 10), distant metastasis, NOS, or carcinomatosis
Code 50 - A combination of codes 10 and 40
Code 99 - Unknown, cannot be assessed, not stated in patient record

Assign the highest applicable code for CS Distant Mets, whether the determination was clinical or pathological and whether or not the patient had preoperative systemic therapy.

For assessing CS Mets Eval, both the findings and distance from the primary site are factors in determining this field. If all workup is deemed negative, code the diagnostic method used to evaluate the site furthest from the primary site. If some of the workup is negative and some positive, code the diagnostic method used for the furthest positive finding. If all the workup is positive, code the diagnostic method used to evaluate the furthest metastatic site from the primary.

Reminder: Select the CS Mets Eval code that documents the report or procedure from which the information was obtained about metastatic involvement farthest from the primary site. This may not be the numerically highest eval code.

- 3. Question:** Are there any CS fields that are not coded?

Response: The CCR requires that all fields except the CS Evaluation fields be coded. CoC approved facilities are required to complete all CS data items, including the CS Evaluation fields.

- 4. Question:** How are the SSF coded when the only information is the MD TNM?

Response: If the medical record does not contain information that can be coded in the SSF fields, use the appropriate code for "unknown" or "not applicable."

BREAST

- 5. Question:** What is the definition of H&E stain?

Response: H&E stands for Hematoxylin and Eosin.

- 6. Question:** In the breast scheme, when would you use CS Lymph Node code 05?

Response: Use code 05 when the regional lymph nodes are negative, but isolated tumor cells (ITC's) are detected on routine H&E stains. Reminder: Lymph nodes with ITC's only are not considered positive lymph nodes. See note 5 in this scheme.

- 7. Question:** How are SSF 4 and 5 coded for in situ breast cancer cases? When would you use code 888?

Response: For Breast Site Specific Factor 4, use codes 000-009 only to report results of IHC on otherwise negative lymph nodes on routine H&E stain, i.e., only when CS Lymph Nodes is coded 00. The same applies to Site Specific Factor 5, relative to codes 000-002.

Code 888 is for cases not coded to 00 for CS lymph Nodes. For instance, if you have a CS Lymph Node code 10, SSF 4 and 5 would be coded 888.

References: CS Manual, page 464
CoC I & R, # 12726

Note 1: Please note the change on page 464 of the CS Manual, under Breast - Site Specific Factor 4, for code 888, CS Lymph Nodes code 05 has been deleted (revision 8/12/04).

Note 2: Under the general CS Lymph Nodes rule, item 2 states to code CS Lymph Nodes to 00, when the CS Extension is coded as in situ, even if no lymph nodes were removed, since "in situ" by definition means noninvasive.

Reference: CS Manual, page 34, item 2

- 8. Question:** How is Breast SSF 4 coded if the lymph node pathology is negative and no IHC was done?

Response: Use Breast Site Specific Factor 4 code 000, regional lymph nodes negative on H&E, no IHC studies done. The same rule applies for SSF 5.

PROSTATE

- 9. Question:** Which EOD prostate guidelines can we apply for Collaborative Staging?

Response: Do not apply any of the EOD prostate guidelines. Prostate guidelines for Collaborative Staging are currently being developed by the CS Steering Committee.

LYMPHOMA

- 10. Question:** In the lymphoma scheme, what is the IPI Score?

Response: IPI Score stands for International Prognostic Index. An international cooperative study developed a prognostic index for patients with follicular lymphoma. Using 5 factors, the researchers were able to predict patients with a less than 50% 5-year survival who would be suitable candidates for more intensive therapy. The 5 risk factors include: Age 60 or over, Ann Arbor stage III-IV, hemoglobin level <120 g/L, elevated LDH and >4 nodal sites. This paper was published in the September 1, 2004 issue of Blood.

PAROTID GLAND

- 11. Question:** For Site Specific Factor 3, what lymph nodes are considered Level I-III for the parotid gland?

Response: Definitions of the levels and lymph node chains in each level for Head and Neck sites are listed on page 37 of the CS Manual.

Reference: CS Manual, page 37, and pages 192-193

Fine Needle Aspiration of Regional Lymph Nodes

DSQC #2005-02

CLARIFICATION

EFFECTIVE: Cases Diagnosed January 1, 2005 Forward

Fine needle aspirations (removal of cells or tissue) of regional lymph nodes are coded in the Scope of Regional Lymph Node Surgery field. Additionally, FNA biopsies of regional nodes are also included in the Number of Positive and Examined Regional Lymph Nodes fields. For Number of Positive Regional Lymph Nodes, if the total number of positive aspirated, biopsied, sampled, or dissected lymph nodes cannot be determined on the basis of cytology or histology, code the combination of lymph nodes to 97. For the Number of Examined Lymph Nodes, if it cannot be determined how many lymph nodes were aspirated, biopsied, sampled, or dissected, code the number of nodes to 98. If an FNA of regional nodes is the only procedure performed on lymph nodes, code Regional Lymph Nodes Positive/Examined to 95/95. Whether or not the lymph node aspiration resulted in cytology or histology does not affect the codes.

Example #1: Breast cancer patient had a biopsy of a sentinel axillary lymph node that was negative. An FNA of an axillary lymph node was performed on the same day and was positive. A month later, an axillary lymph node dissection was performed and the pathology report stated that 11/19 lymph nodes were positive.

Surgical Procedure #1: Code Scope of Regional Lymph Node Surgery to Code 2 - Sentinel lymph node biopsy.

Surgical Procedure #2: Code Scope of Regional Lymph Node Surgery to Code 7 - Sentinel lymph node biopsy & code 3, 4, or 5 at different times.

Rationale: Codes 0-7 are hierarchical. If only one procedure can be recorded, code the procedure that is numerically higher.

Code CS Regional Lymph Nodes Positive/Examined: 12/21

Rationale: Positive: 0 sentinel node, 1 FNA of a node, 11 dissected nodes; Examined: 1 sentinel node, 1 FNA of a node, 19 dissected nodes.

Example # 2: Breast cancer patient had an FNA biopsy of an axillary lymph node that was positive for carcinoma. Subsequently, an axillary lymph node dissection was done elsewhere. Findings stated to be negative, but unknown how many lymph nodes were examined.

Surgical Procedure #1: Code Scope of Regional Lymph Node Surgery to Code 1 - Biopsy or aspiration of regional lymph nodes, NOS

Surgical Procedure #2: Code Scope of Regional Lymph Node Surgery to Code 3 - Number of regional lymph nodes removed unknown or not stated; regional lymph node removed, NOS

Code CS regional Lymph Nodes Positive/Examined: 01/97

Rationale: A single lymph node was positive on FNA, thus Regional Lymph Nodes Positive is coded to 01; regional lymph node removal was documented as a dissection, number of nodes is unknown/not stated, thus Regional Lymph Nodes Examined is coded to 97.

Unknown Social Security Number

DSQC #2005-03

CLARIFICATION

EFFECTIVE: Immediately

It has come to the attention of the CCR that some facilities are submitting cases to the regional registries with social security numbers coded to 000-00-0001. Apparently the admitting departments at these facilities use this number when the patient's social security number is unknown. This is not a valid social security number according to the Social Security Administration. Do not submit cases to the regional registries using this invalid social security number.

Please follow the guideline in Volume I, section III.2.3 that states to code an unknown social security number to 999-99-9999.

Melanoma Surgery Code Guidelines

DSQC #2005-04

GUIDELINE

EFFECTIVE: Cases diagnosed January 1, 2005 Forward

Below please find the revised Melanoma Surgery Code Guidelines. Although this guideline is effective with cases diagnosed January 1, 2005 forward, registrars are not required to go back and apply these guidelines to 2005 cases already submitted to the regional registry.

In accordance with the CCR General Visual Editing Guidelines, discrepancies resulting from new information/guidelines will not be counted for one month (30 days) after statewide distribution. *DSQC Memo 2005-04 has a distribution date of August 5, 2005, thus regional registries will not count discrepancies using this guideline on cases with a Date Completed earlier than September 5, 2005.*

GENERAL GUIDELINES

1. Code a shave, punch bx or incisional biopsy or biopsy NOS as surgery, if it removes all of the melanoma (exc bx=27). Use the surgery date from this procedure.
2. Code a shave or punch biopsy, incisional biopsy or biopsy NOS as surgical, diagnostic and staging procedure (02), if it does not remove all of the melanoma. Also, if it is not known if all of the melanoma has been removed, code it as a surgical, diagnostic and staging procedure.
3. If the first procedure is labeled as an excisional bx (27) or an excision NOS (20) code them per the titles **unless surgical margins are > 1cm (then code in the applicable 40 range).**
4. Code the subsequent procedure based on the surgical margin measurements first. If this places the surgery code in the 30's range, then apply the code that corresponds to the first procedure (31=shave, punch=32, etc).
 - a. If the surgical margins are **equal to or <1cm**, code 30-33 (as applicable).
 - b. If the surgical margins are **>1cm**, code 45-47 (as applicable).
 - c. If the surgical margins are NOS (**not documented or not known**), code 30-33 (as applicable).
 - d. If the subsequent procedure is a Mohs, use the appropriate 34-36 code.

NOTE 1: The biopsy NOS, shave, punch or incisional biopsy and the gross excision do not have to be done as a single procedure to code 30-33.

NOTE 2: Margins must be taken from the pathology report—following CAP (College of American Pathologists) protocol guidelines.

NOTE 3: To use the codes 45-47, the surgical margins must be > 1cm and microscopically negative.

NOTE 4: When there are no margins documented in the pathology report, do not guess/estimate the margin measurements from the specimen size.

NOTE 5: If there are margins for length, width and depth and they are different, code the smallest margin. The smallest margin dictates the surgery code, no matter where it comes from (width, length or depth).

NOTE: *The CoC Technical Staff (ACoS) has reviewed this document for accuracy.*

Use of SEER*Rx and Drugs Changing Categories

DSQC #2005-05

CLARIFICATION

EFFECTIVE: Cases Diagnosed January 1, 2005 Forward

For cases diagnosed 1/1/2005 forward, registrars must use SEER*Rx, for coding systemic treatment (i.e. chemotherapy, hormone therapy, and immunotherapy). SEER*Rx is the downloadable, interactive antineoplastic drug database that replaces SEER Self-Instructional Manual Book 8, Antineoplastic Drugs. SEER*Rx can be downloaded from <http://www.seer.cancer.gov/seerrx><http://www.seer.cancer.gov/seerrx>.

Since Book 8, the categories for a few drugs have changed from immunotherapy to cytostatic chemotherapy. Registrars will need to make appropriate corrections in their databases for any cases diagnosed 1/1/2005 forward in which a drug changed categories. To assist registrars in identifying these drugs, attached is a SEER SING entry, listing the drugs that changed categories from immunotherapy to cytostatic chemotherapy. There were no drugs that changed categories from chemotherapy to immunotherapy.

For cases diagnosed prior to 1/1/2005, registrars may use SEER*Rx if they wish. Registrars do not need to change or correct the drugs that switched categories for cases diagnosed prior to 1/1/2005.

In accordance with the Visual Editing Guidelines, discrepancies resulting from this new information will not be counted for one month (30 days) after statewide distribution. The Date Completed on the abstract will be the date the visual editor will use to calculate the 30-day time frame. Discrepancies will not be counted in which drugs shifted categories for cases with a Date Completed prior to December 31, 2005, or for any cases diagnosed prior to January 1, 2005.

Question			
Chemotherapy/Immunotherapy: Which drugs changed categories when SEER*Rx came out?			
Answer			
Please refer to http://seer.cancer.gov/tools/seerrx/			
SEER*Rx is effective for cases diagnosed 1-1-2005 and forward. It replaces all previous references. It is neither required nor recommended that cases treated prior to 2005 be recoded.			
The following drugs in the 5/17/02 Book 8 update changed from immunotherapy to cytostatic chemotherapy in SEER*Rx:			
alemtuzumab/Campath			
bexarotene/Targretin			
bevacizumab/Avastin			
bortezomib/Velcade			
pegaspargase/Oncaspar			
rituximab/Rituxan			
trastuzumab/Herceptin			
asparaginase			
The following drugs may have been coded as monoclonal antibodies but are radioisotopes in SEER*Rx:			
epratuzumab/LymphoCide			
ibrituzumab			
tiuxetan/Zevalin			
tositumomab/Bexxar			
Any other monoclonal antibodies either remained as monoclonal antibodies or it was a local decision to			

code them as immunotherapy.
There were no drugs that changed from chemotherapy to immunotherapy.

RESCINDMENT - DSQC MEMORANDUM 2002-08 "Coding Complex Morphologic Diagnoses (revised 8/02)

DSQC #2006-01
CLARIFICATION

EFFECTIVE: For Cases Diagnosed in 2005 and 2006

Effective immediately, DSQC Memorandum 2002-08 "Coding Complex Morphologic Diagnoses," is rescinded and the rules contained in the document should no longer be applied.

SEER has informed the CCR that the document, "Coding Complex Morphologic Diagnoses" distributed by SEER, is no longer to be used in coding complex and difficult morphology combinations. Instead, SEER is directing registrars to use the SEER Multiple Primaries and Histology Rules from the *SEER Program Coding and Staging Manual 2004*, Fourth Edition. The pages from the *SEER Program Coding and Staging Manual 2004*, pertaining to histology coding are attached.

Please note that on page 2 of this attached document, the terms "architecture" and "pattern" may be used to designate the majority of tumor if written in the College of Pathology (CAP) protocol. Documentation in the pathology text is required indicating that the term originated from the CAP protocol (e.g. as per CAP protocol).

Please apply these multiple primaries and histology rules for all cases diagnosed in 2005 and 2006. Registrars are not expected to go back and apply these rules to cases already abstracted and submitted to the regional registry.

Note: in accordance with the CCR Visual Editing Standards, discrepancies resulting from this new information will not be counted for one month (30 days) after statewide distribution. The Date Completed on the abstract will be the date the visual editor will use to calculate the 30-day time frame.

DSQC Memo 2006-01 Attachment

Histologic Type ICD-O-3

The data item Histologic Type describes the microscopic composition of cells and/or tissue for a specific primary. In the rare instance where there is no tissue pathology, code the histology the medical practitioner uses to describe the tumor. The tumor type or histology is a basis for staging and determination of treatment options. It affects the prognosis and course of the disease.

The *International Classification of Diseases for Oncology*, Third Edition (ICD-O-3) is the standard reference for coding the histology for tumors diagnosed in 2001 and later. Do not record the 'M' that precedes the histology code. Refer to *ICD-O-3* for guidance in coding the histology. See sections *Coding Guidelines for Topography and Morphology*, and *Summary of Principal Rules for Using the ICD-O*, Third Edition.

The histology can be coded only after the determination of multiple primaries has been made.

Synonyms and Equivalent Terms

Mixed, combined, and complex are **usually** used as synonyms when describing histology.

Definitions

Cancer, NOS (8000) and **carcinoma**, NOS (8010) are not interchangeable.

Carcinoma, NOS (8010) and **adenocarcinoma** (8140) are interchangeable (See ICD-O-3).

Complex (mixed, combined) histology: The pathologist uses **multiple histologic terms** to describe a tumor. The histologic terms are frequently connected by the word "and" (for example ductal and lobular carcinoma).

Different histology: The first three digits of the ICD-O-3 histology code are different.

Different subtypes: The NOS cell types often have multiple subtypes; for example, scirrhous adenocarcinoma (8143), adenocarcinoma, intestinal type (8144), and linitis plastica (8141) are subtypes of adenocarcinoma, NOS (8140).

Majority of Tumor:

Terms that mean the majority of tumor	Terms that DO NOT mean the majority of tumor
Predominantly	With foci of
With features of	Focus of/focal
Major	Areas of
Type	Elements of
With.....Differentiation*	Component
Pattern (Only if written in College of American Pathologists (CAP) Protocol)**	
Architecture (Only if written in College of American Pathologists (CAP) Protocol)**	

Note: Examples of CAP protocols for specific primary sites may be found on the website – http://www.cap.org/cancerprotocols/protocols_intro.html

* Effective 1/1/1999 diagnosis
 ** Effective 1/1/2003 diagnosis

Mixed/combined histology: Different cell types in one tumor; terms used interchangeably. In most cases, the terms mixed and combined are used as synonyms; however the term mixed may designate a specific tumor.

Not Otherwise Specified (NOS): "Not Otherwise Specified."

Same histology: The first three digits of the ICD-O-3 histology code are identical.

Coding Instructions

Refer to "Determining Multiple Primaries" in the first section of this manual to determine the number of primaries. Use all of the information for a single primary to code the histology.

1. If there is no tumor specimen, code the histology described by the medical practitioner.

Example 1: The patient has a CT scan of the brain with a final diagnosis of glioblastoma multiforme (9440). The patient refuses all further workup or treatment. Code the histology to glioblastoma multiforme (9440).

Example 2: If the physician says that the patient has carcinoma, code carcinoma, NOS (8010).

2. Use the histology stated in the **final diagnosis** from the pathology report. Use the pathology from the procedure that resected the majority of the primary tumor.

If a more specific histologic type is definitely described in the microscopic portion of the pathology report or the comment, code the more specific diagnosis.

3. Lymphomas may be classified by the **WHO** Classification, **REAL** system, **Rappaport**, or **Working Formulation**. The WHO Classification is preferred. See page 13 in the ICD-O-3 for a discussion of hematologic malignancies.
4. Cases reported to SEER cannot have a metastatic (/6) behavior code. If the only pathology specimen is from a metastatic site, code the appropriate histology and the malignant behavior code /3. The primary site and its metastatic site(s) have the same basic histology.

Histology Coding Rules for Single Tumor

- The rules are in hierarchical order. Rule 1 has the highest priority.
- Use the rules in priority order.
- Use the first rule that applies to the case. (Do not apply any additional rules.)

1. Code the histology if only one type is mentioned in the pathology report.
2. Code the **invasive histology** when both invasive and in situ tumor are present.

Example: Pathology report reads infiltrating ductal carcinoma and cribriform ductal carcinoma in situ. Code the invasive histology 8500/3.

Exception: If the histology of the invasive component is an 'NOS' term (e.g., carcinoma, adenocarcinoma, melanoma, sarcoma), then code the histology of the specific term associated with the in situ component and an invasive behavior code.

3. Use the **mixed** histology code if one exists

Examples of mixed codes: (This is not a complete list, these are examples only)

8490 Mixed tumor, NOS

9085 Mixed germ cell tumor
 8855 Mixed liposarcoma
 8990 Mixed mesenchymal sarcoma
 8951 Mixed mesodermal tumor
 8950 Mixed Mullerian tumor
 9362 Mixed pineal tumor
 8940 Mixed salivary gland tumor, NOS
 9081 Teratocarcinoma, mixed embryonal carcinoma and teratoma

4. Use a **combination** histology code if one exists

Examples of combination codes: (This is not a complete list; these are examples only)

8255 Renal cell carcinoma, mixed clear cell and chromophobe types
 8523 Infiltrating duct carcinoma mixed with other types of carcinoma
 8524 Infiltrating lobular carcinoma mixed with other types of carcinoma
 8560 Adenosquamous carcinoma
 8045 Combined small cell carcinoma, combined small cell-large cell

5. Code the **more specific term** when one of the terms is 'NOS' and the other is a more specific description of the same histology.

Example 1: Pathology report reads poorly differentiated carcinoma, probably squamous in origin. Code the histology as squamous cell carcinoma rather than the non-specific term "carcinoma."

Example 2: The pathology report from a nephrectomy reads renal cell carcinoma (8312) (renal cell identifies the affected organ system rather than the histology cell type) in one portion of the report and clear cell carcinoma (8310) (a histologic cell type) in another section of the report. Code clear cell carcinoma (8310); renal cell carcinoma (8312) refers to the renal system rather than the cell type, so renal cell is the less specific code.

6. Code the **majority** of tumor.
 - a. Based on the pathology report description of the tumor.
 - b. Based on the use of majority terms. See definition for majority terms.
7. Code the **numerically higher** ICD-O-3 code. This is the rule with the lowest priority and should be used infrequently.

Histology Coding Rules for Multiple Tumors with Different Behaviors in the Same Organ Reported as a Single Primary

Code the histology of the invasive tumor when one lesion is in situ (/2) and the other is invasive (/3).

Example: At mastectomy for removal of a 2 cm invasive ductal carcinoma, an additional 5 cm area of intraductal carcinoma was noted. Code histology and behavior as invasive ductal carcinoma (8500/3).

Histology Coding Rules for Multiple Tumors in Same Organ Reported as a Single Primary

1. Code the histology when multiple tumors have the same histology.
2. Code the histology to adenocarcinoma (8140/_; in situ or invasive) when there is an adenocarcinoma and an adenocarcinoma in a polyp (8210/_ , 8361/_ , 8263/) in the same segment of the colon or rectum.
3. Code the histology to carcinoma (8010/_; in situ or invasive) when there is a carcinoma and carcinoma in a polyp (8210/_) in the same segment of the colon or rectum.
4. Use the **combination** code for the following:
 - a. Bladder: Papillary and urothelial (transitional cell) carcinoma (8130)
 - b. Breast: Paget Disease and duct carcinoma (8541)
 - c. Breast: Duct carcinoma and lobular carcinoma (8522)

- d. Thyroid: Follicular and papillary carcinoma (8340)
5. Code the more specific term when one *SEER Program Coding and Staging Manual 2004*, Pages 84 – 87 of the terms is 'NOS' and the other is a more specific description of the same histology.
6. Code all other multiple tumors with different histologies as multiple primaries.

Appendix V: Brain and CNS Site/Histology Listing

Based on ICD-O-3 SEER Site/Histology Validation list

Reviewed by Neuropathologists: Drs. Roger McLendon, Janet Bruner, Steven Moore

SEER: Lynn Ries

CBTRUS: Dr. Bridget McCarthy, Carol Kruchko

Underlined bold type indicates histology codes with a benign or uncertain behavior code that have been added by CBTRUS and not contained in the ICD-O-3 SEER Site/Histology Validation List.

Bold type indicates histology codes with a malignant behavior code that have been added by CBTRUS and not contained in the ICD-O-3 SEER Site/Histology Validation List.

Red color indicates histology codes new to the ICD-O-3 SEER Site/Histology Validation List.

Appendix W: Race and Nationality Descriptions

Appendix W

Appendix W consists of the Race and Nationality Descriptions from the 2000 Census and Bureau of Vital Statistics. This listing is an appendix to the 2004 SEER Race Coding Guidelines.

As a reminder, the CCR has added a new code, code 90 for Other South Asian. Please note that code 90 is not included in Appendix W because it is a code added by the CCR. Please refer Volume I, Section III.2.9 Race and Ethnicity for more detailed race coding information.

Races to be coded as 90 include:

- Bangladeshi
- Bhutanese
- Nepalese
- Sikkimese
- Sri Lankan

Do not use code 96 as Appendix W indicates for the races listed above.

Appendix W.1

RACE AND NATIONALITY DESCRIPTIONS FROM THE 2000 CENSUS AND BUREAU OF VITAL STATISTICS

Note: Use these lists only when race is not stated but other information is provided in the medical record.

Key

Use this code unless patient is stated to be Native American (Indian) or other race

* *Terms listed in reference 2, above.*

! *Description of religious affiliation rather than stated nationality or ethnicity; should be used with caution when determining appropriate race code.*
