

The California Cancer Registry is Pleased to Announce Our New Learning Management System, FLccSC!

What is *FLccSC*?

A *Fundamental Learning Collaborative for the Cancer Surveillance Community (FLccSC* aka “flossy”) is a web-based education portal and Learning Management System (LMS).

- *FLccSC* is an education collaborative among and between ALL NPCR-funded state cancer registries. Education created by one state registry can be shared with other state registries, along with all applicable training documents including approved CE’s.
 - **In addition, through special arrangements, CA has obtained permission to host the monthly recorded North American Association of Central Cancer Registries (NAACCR) education webinars, FREE to all California registrars and data collectors (earn 3CEs each)!**
- Each state registry chooses whether to create original education, import shared education from other states or offer a combination. The California Cancer Registry (CCR) has plans for all three.
- Educational content may consist of any combination of Video’s, PowerPoint presentations, supporting PDFs and Quizzes.
- When an education module is successfully completed, the User/Student will receive a Certificate of Completion including CE’s where applicable. CE certificates can be saved or printed on demand.
- *FLccSC* also has a report function which users/students can use to track current and past-completed education in *FLccSC*, including awarded CEs.
- ***FLccSC* is available 24/7. Take advantage of education & training on YOUR schedule. And best of all, educational courses in *FLccSC* will always be FREE!**
- **Download a quick tutorial of steps to register for *FLccSC* [here](#)**

Register for Your *FLccSC* User Account Now!

- ❖ **California *FLccSC* LMS User/Student URL link: <http://cas.fcDSLms.med.miami.edu>**

(The *FLccSC* LMS is maintained on a central server with the Florida Cancer Data System (FCDS))
